Why Organizations Should Adopt Low-code, Copilot and AI Agent

70%

Of new applications will be built using low-code/no-code by 2026

1.3
Billion

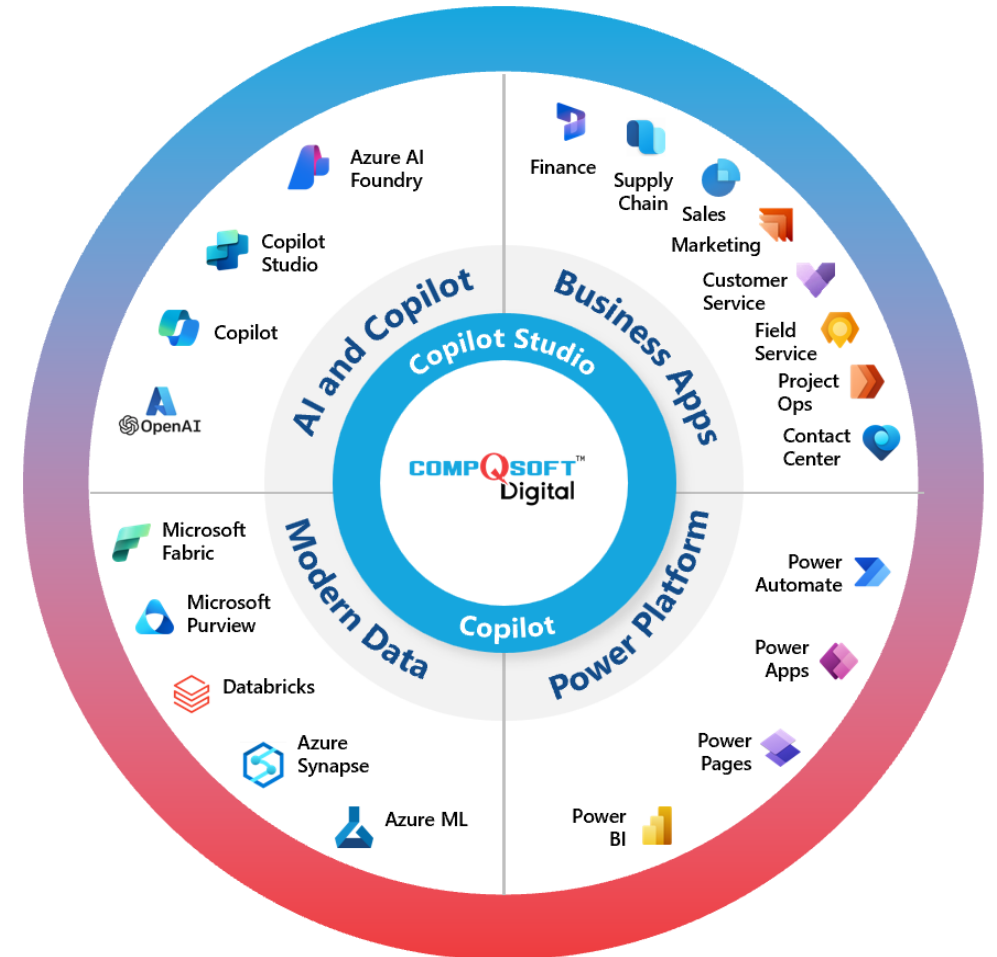

Projected new logical apps by 2028

79%

Of developers already use low-code or automation tools, signaling a shift toward democratized development.

33%

Of enterprise apps to include agentic AI by 2028

Rapid app development, prebuilt connectors, and automation significantly compress time-to-market and enable faster realization of business outcomes.

Power Platform + Copilot + Agent Workshop

Microsoft Power Platform and Microsoft Copilot Studio represent the world's leading low-code development and agentic platform — an integrated environment where apps and intelligent agents work in concert to drive automation, dynamic user experiences, and enterprise-scale innovation.

Challenges Workshop Addresses

SaaS Sprawl & Integration Complexity

Large enterprises operate across dozens of disconnected SaaS platforms, creating data silos, redundant licensing costs, and significant manual overhead to maintain integrations.

Legacy Modernization Paralysis

Decades-old custom tools and monolithic applications are expensive to maintain, lack AI readiness, and create skill gaps that slow digital transformation initiatives.

High Manual Effort Across Core Processes

Critical business workflows — approvals, reporting, compliance, and customer engagement — remain heavily manual, making them error-prone, slow, and difficult to scale.

Slow Time-to-Value for App Development

Traditional development cycles, IT bottlenecks, and governance gaps delay the delivery of business applications, preventing organizations from responding rapidly to market changes.

What If You Could Change Everything

- What if you could eliminate 25% of your SaaS footprint this year?
- What if you could complete that legacy modernization in 6 weeks instead of 12 months?
- What if you could make your top 10 processes each 10x better than the status quo?

How Microsoft Power Platform + Copilot + Agents Helps

Microsoft Power Platform + Copilot + Agents is a unified platform that addresses every layer of enterprise transformation — from individual productivity gains to organization-wide digital labor at scale.

**Co-Create with
AI-Powered Tools**

**Build Faster with
Reusable
Components**

**Scale Digital
Labor with
Intelligent
Agents**

**Replace
Fragmented
Systems with
Intelligent
Solutions**

**Equip Everyone
with AI Tools**

**Build on a Fully
Managed, Secure
Platform**

Key Benefits

- Reduce application development cycles by up to 70% using low-code tooling.
- Scale AI Adoption with Enterprise-Grade Agility
- Maximize ROI with Intelligent Automation
- Govern at Scale with Centralized Oversight

Upgrading every process requires empowering every expert and accelerating every developer.
