Platform**

# Accelerate Innovation with Low-Code AI App Development:
3-Week Assessment with Microsoft Copilot & Power Platform

Organizations today face mounting pressure to deliver intelligent applications faster, with limited resources and growing complexity in integrating AI into business processes.

CompQsoft Digital's _Low-Code AI Apps_ _Development Assessment_ empowers your teams to rapidly design, prototype, and deploy AI-driven solutions using Microsoft Copilot and Power Platform. Our proven framework helps you unlock the full potential of low-code tools, ensuring faster time-to-market, optimized costs, and AI solutions that are secure, scalable, and business-ready.

Assessment Approach:

Over 3-week, CompQsoft Digital conducts a structured, collaborative engagement:

1. **Discovery & Analysis:** Understand your business processes, current app ecosystem, and AI adoption readiness.

2. **Use Case Identification:** Pinpoint high-value AI opportunities that align with strategic goals.

3. **Solution Blueprinting:** Design low-code AI app prototypes leveraging Microsoft Copilot and Power Platform capabilities.

4. **Roadmap & Enablement:** Provide actionable recommendations for scaling AI adoption and enhancing citizen developer productivity.

Key Deliverables:

- AI readiness assessment and gap analysis

- Prioritized list of AI-driven app use cases

- Low-code prototype leveraging Power Platform & Copilot integration

- Technical architecture and governance guidelines

- Scalable AI adoption roadmap with next-step recommendations
