Microsoft 365 Data Protection Assessment

COMPUGEN
Dream. Design. Deliver.

Enhancing data security, compliance, and operational resilience within Microsoft 365

Data protection is crucial for maintaining the integrity, confidentiality, and availability of sensitive information. With the increasing volume of data being generated and stored by organizations, the risk of cyber threats and data breaches has escalated. Ensuring robust data protection measures helps organizations comply with regulatory requirements, protect their reputation, and build trust with customers and stakeholders.

Microsoft 365 Data Protection Assessment is a comprehensive evaluation designed to ensure that organizations are effectively safeguarding their data within the Microsoft 365 ecosystem. In today's digital age, data security is paramount, and this assessment provides a structured approach to understanding and mitigating risks associated with data breaches and unauthorized access.

What we do

- **Initial Planning.** Begin by defining the scope of the assessment, identifying key stakeholders, and establishing objectives. This step sets the foundation for a systematic evaluation.

- **Data inventory.** Create an inventory of all data assets within the organization, categorizing them based on sensitivity and importance. This helps prioritize protection measures for critical data sets.

- **Policy review.** Review existing data protection policies and procedures to identify gaps and areas for improvement. Ensure that policies align with industry standards and best practices.

- **Risk assessment.** Conduct a thorough risk assessment to identify potential threats and vulnerabilities. Evaluate the likelihood and impact of various risk scenarios to prioritize mitigation efforts.

What you get

Benefits

- Enhances data security by systematically evaluating and improving protection measures.
- Ensures compliance with industry standards and best practices.
- Identifies and mitigates potential threats and vulnerabilities.
- Improves operational resilience in a complex digital environment.

- **Policy Review Report.** Identification of gaps and areas for improvement in existing data protection policies to ensure alignment with industry standards and best practices.
- **Risk Assessment Report.** Comprehensive evaluation of potential threats and vulnerabilities, along with prioritization of mitigation efforts based on the likelihood and impact of risk scenarios.

Why Compugen

Compugen stands out as an ideal partner for your Microsoft 365 Data Protection Assessment due to its proven expertise and commitment to delivering comprehensive and tailored solutions. With a deep understanding of industry standards and best practices, Compugen ensures your organization's data protection policies align seamlessly with compliance requirements. Our thorough risk assessment process evaluates potential threats and vulnerabilities, enabling the prioritization of impactful mitigation strategies. Furthermore, Compugen excels in implementing advanced security controls, from enhancing access management to integrating cutting-edge encryption and DLP technologies. By choosing Compugen, you gain a partner dedicated to continuous monitoring and improvement, fostering not only data security but also stakeholder trust and long-term operational resilience. Our focus on addressing your unique needs ensures a robust and forward-thinking approach to safeguarding your organization's most valuable asset—your data.
