

THE CHALLENGE

Many enterprise organisations have large, complex data landscapes, with more choices than ever before. The typical challenges that we see are competing and conflicting priorities, resource constraints and the need to move at pace.

Our Microsoft Azure data service portfolio is designed to meet these challenges head on, by supporting our customers to modernise, show data value, and manage their data estates, by building modernised platforms for existing data needs and future digital services.

We understand your challenges, and by working with us we can help you make the right choices, to respond faster and more effectively to digital business change to get you to market quicker than before, as well as unlocking the value within your data and applications to help you drive business success

SERVICE OFFERING

Computacenter's Data Platform Modernisation service offers the capability for assessment, design, architecting and migration to a Microsoft Azure modernised data platform, driving efficiency in public cloud.

Enabling customers to migrate from legacy systems and mitigate risk, security vulnerability and reduce cost, whilst providing a consolidated source for follow on data value services.
