COMPUTACENTER DATA SERVICES

Computacenter

STANDARD DELIVERY APPROACH

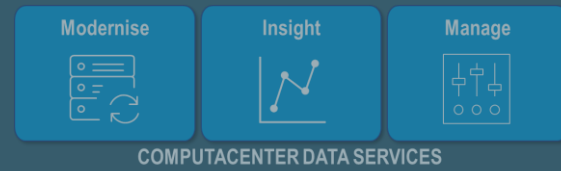

COMPUTACENTER DATA SERVICES

Computacenter provide consistent end to end service delivery that will take you towards your strategic goal in a collaborative and consultative manner. Our approach ensures you have peace of mind with full visibility of the steps involved. We provide full scope of work documentation detailing what to expect and when to expect it, including costs and timescales. Assess & Discover forms the start of the data modernisation journey but can be consumed as a stand-alone service offering.

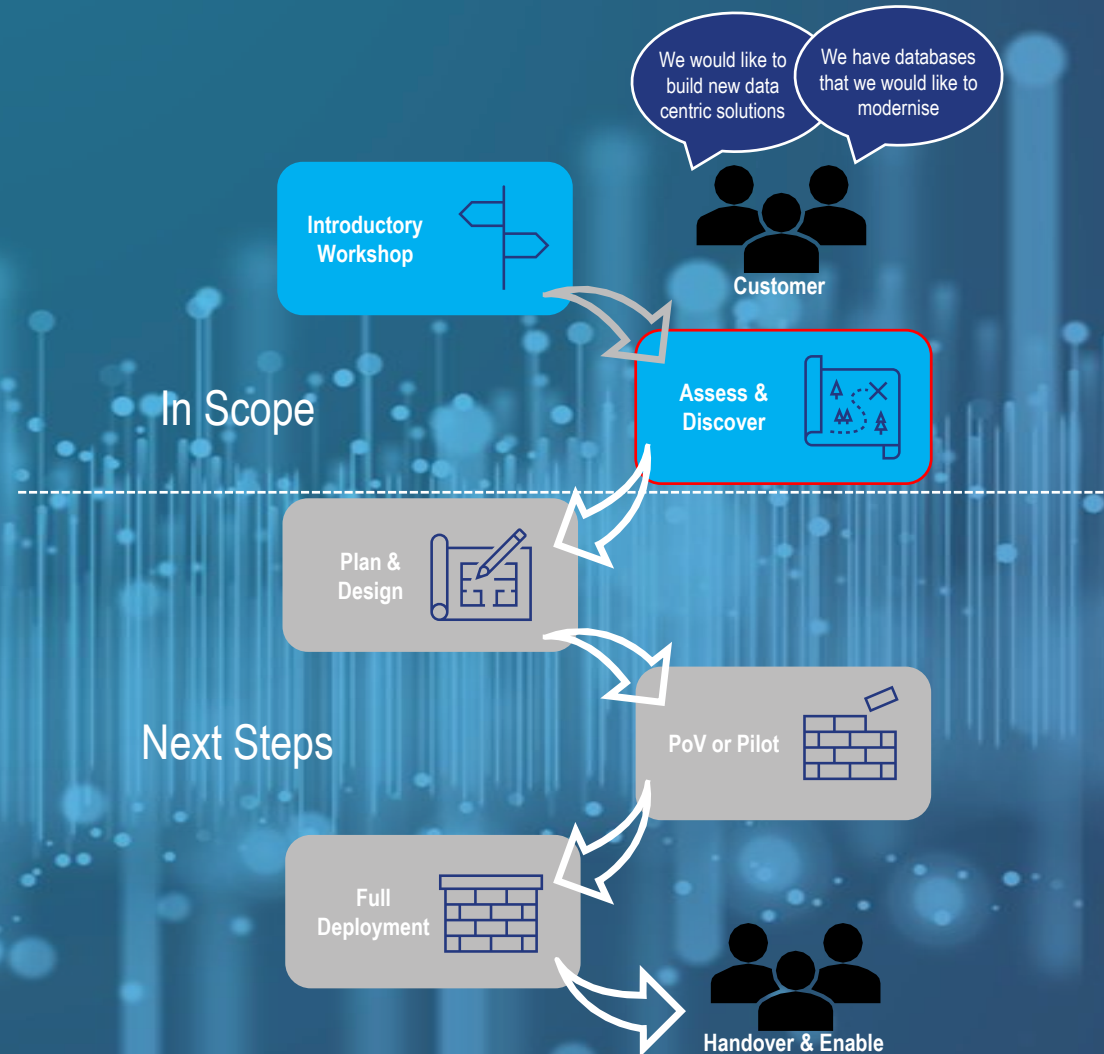

Capture the business needs aligned to the data value use case area.

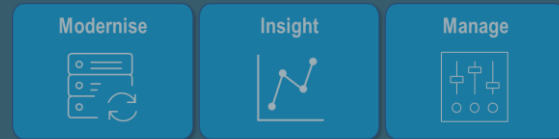

ASSESS & DISCOVER - SERVICE SCOPE

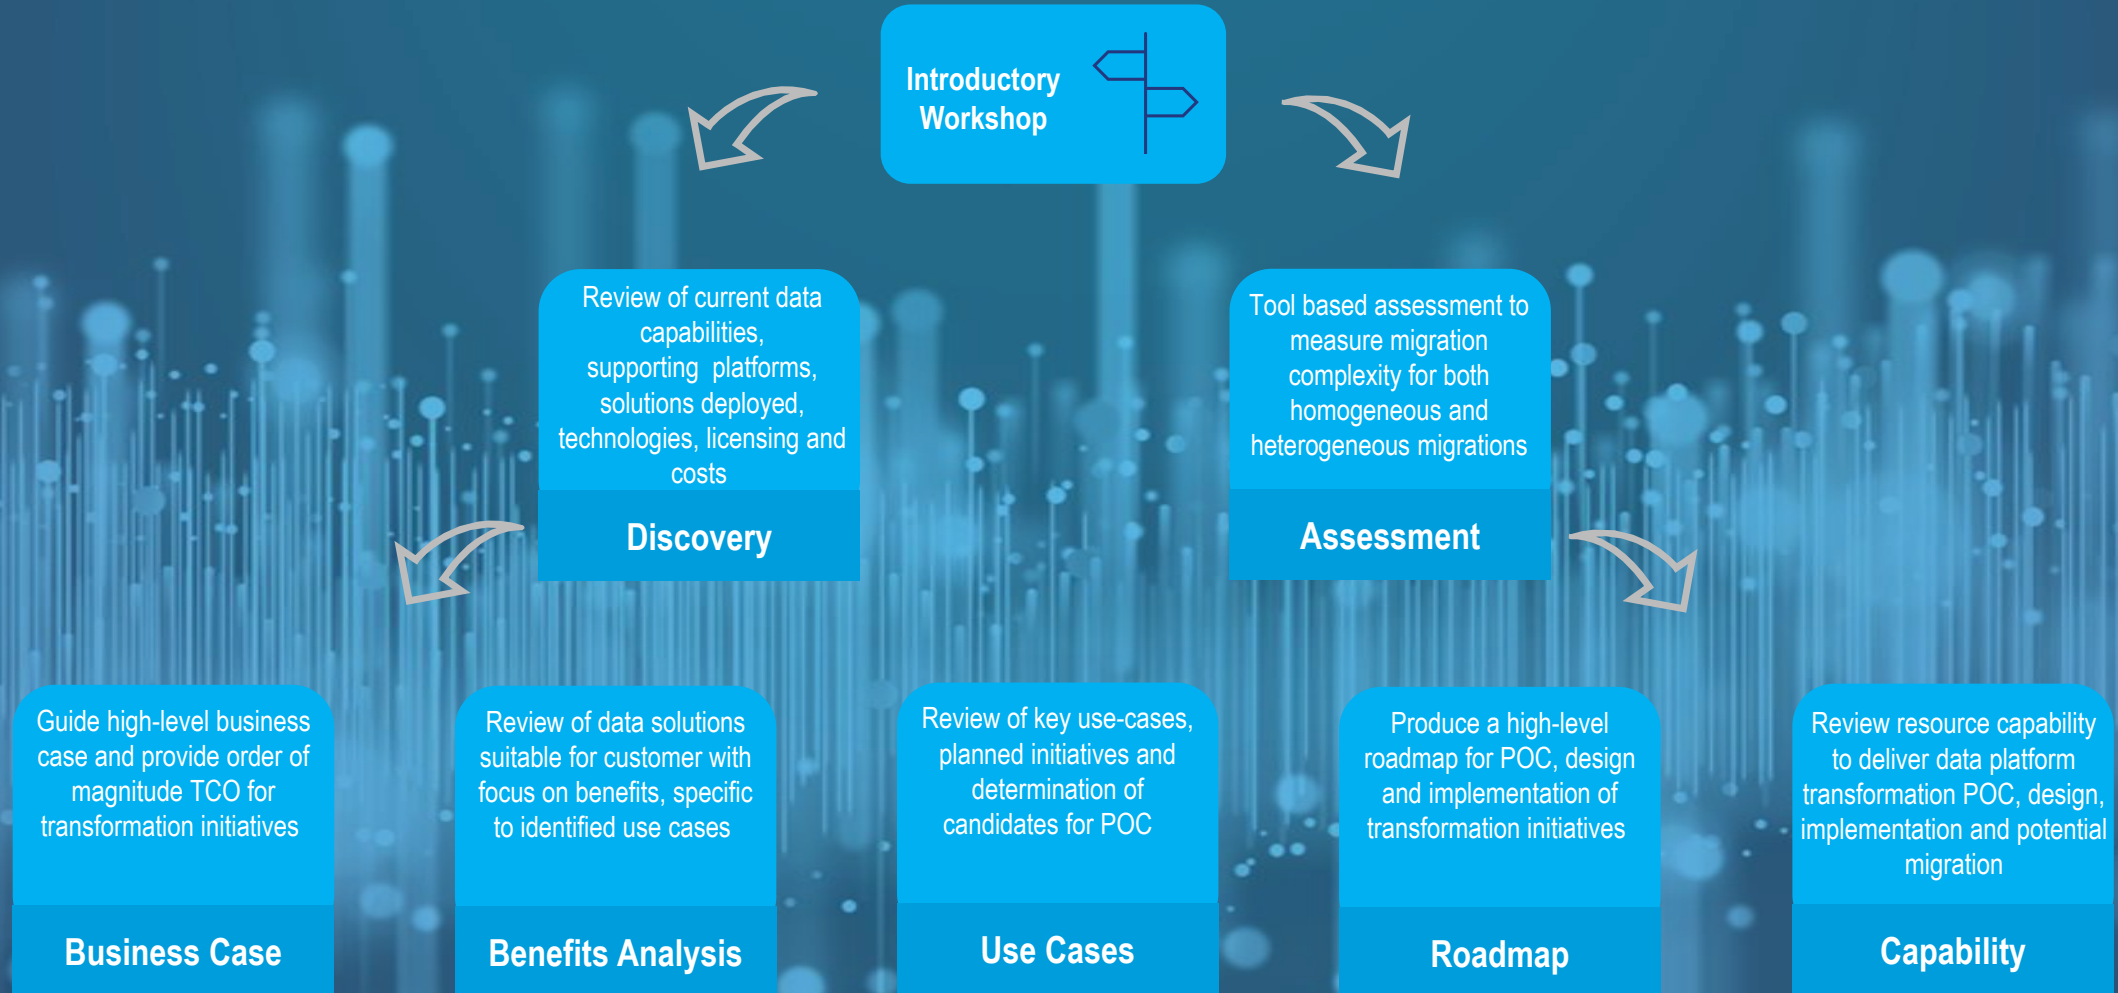

- Suitable for customers who want to achieve best possible outcomes by leveraging data and cloud technologies
- Initial engagement via Introductory Workshop that can be tailored to meet the needs of the customer
- Wider Data Platform Modernisation Services will assess, advise, build new, or move existing workloads to modern cloud or datacenter technology
- Consistent end-to-end capability per service offering can be delivered as stand alone or as a group

ASSESS & DISCOVER COMPONENTS

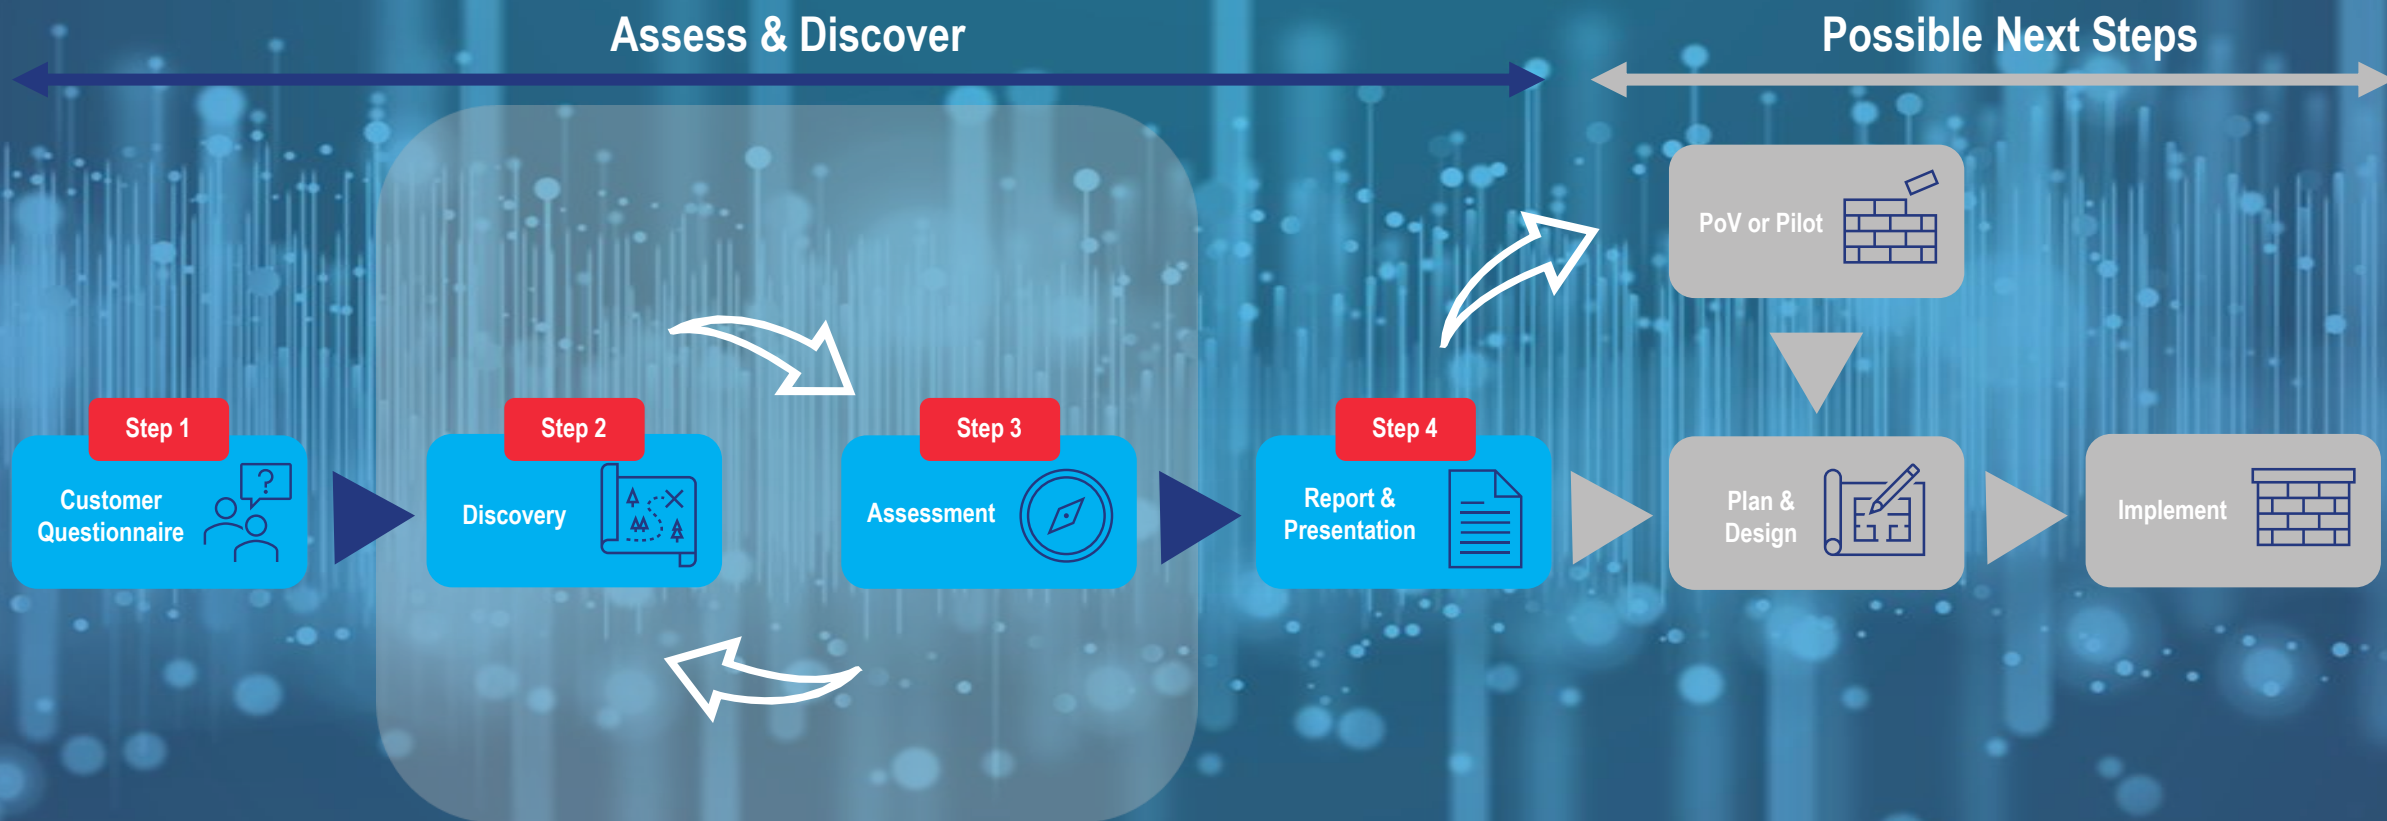

COMPUTACENTER DATA SERVICES

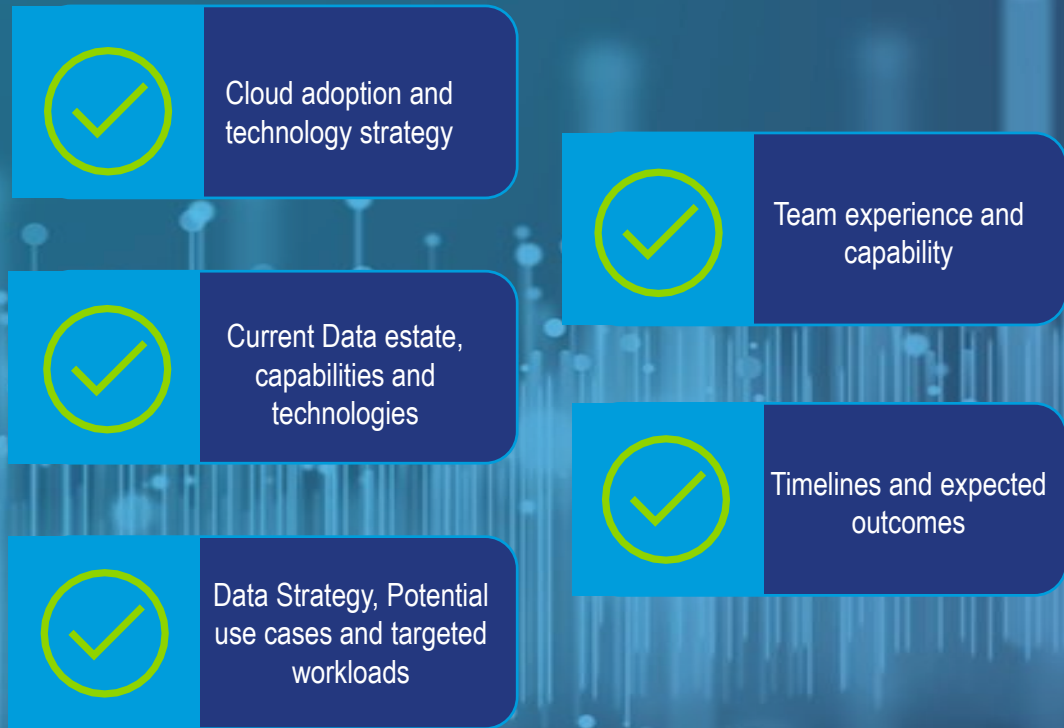

HIGH-LEVEL APPROACH

The service is a mix of manual discovery and the use of assessment tools, to gather information on the customers existing data estate, to provide recommendations for the modernisation and potential migration of workloads to the most appropriate data technology.

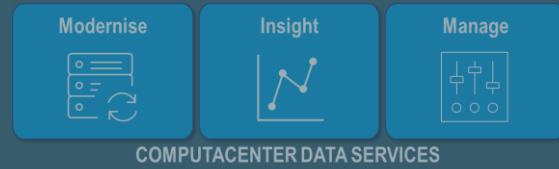

CUSTOMER QUESTIONNAIRE

- An optional initial questionnaire allows the customer to articulate their current understanding of their requirements, capability and aspirations.
- The responses to this questionnaire will be used to tailor the follow-on workshops to better fit the customer's needs.
- There are five sections to complete, covering:

DISCOVERY APPROACH

- Initial workshop with the key stakeholders will be held to walk through the responses to the questionnaire to ascertain the customer's current state data capabilities, targeted workloads, future strategy and pipeline initiatives that will set the scene for follow-up deeper dive sessions.
- From experience, we recognise that discovery may be completed differently depending on how the customer operates. However, we anticipate this will usually be made up of a series of separate in-depth workshops.
- Ideally, Computacenter will spend some time working with the customer's data and technology teams to get an understanding of the current data estate, dependencies and technology implementation.
- Spending time with the customers data product development team will be valuable to understand current and future data initiatives to evaluate where new technologies could be best leveraged.

KEY STAKEHOLDERS

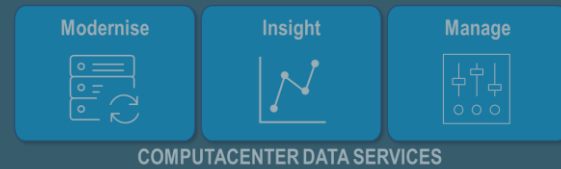

ASSESSMENT

- Assessment of business use cases and alignment to potential data, analytics, and AI/ML solutions appropriate for the customer and specific industry vertical.
- Migration options will be assessed taking into consideration the customers current data estate, strategy, and preferred technologies.
- A broad set of data and analytics solution areas are supported.
- Tooling will be used where possible to automate the assessment process.

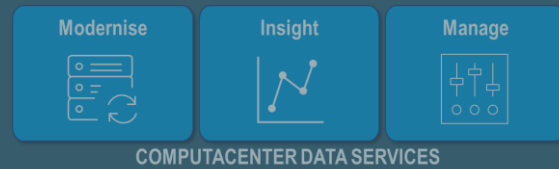

FINAL REPORT & PRESENTATION

- The main output of the assessment & advisory service is the final report and Exec presentation.
- This will be produced after capturing all the key information, and will be presented to the key stakeholders in a final workshop.
- The report will include:
 - A detailed summary of the key findings including output from discovery and review of use cases.
 - Tailored recommendations including high-level solution designs for data platform transformation.
 - Detailed analysis of migration options per workload with recommendations.
 - Identification of high-risk migrations.
 - Essential information to guide business case, including order of magnitude TCO, and roadmap for data platform transformation.
- Importantly, the report will recommend options for the next steps taking into consideration timelines and expected outcomes. These options could be to move forward with a PoV/ Pilot, or full data platform design, plan and implementation.

DELIVERY TIMESCALES

The timescales for the assessment & discovery service are dependent on the size and complexity of the estate to be assessed but an indicative estimate is shown:

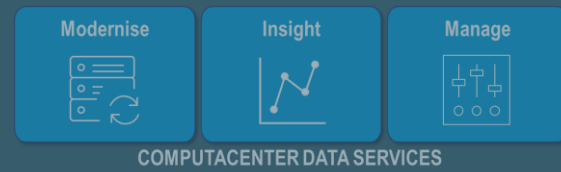

Estimated Timescales & Team:

- Total Elapsed = 25 Days
 - 1 x Data SA (16 Days)
 - 2 x Consultant (16 Days Each)
 - 1 x Data Analyst (16 Days)
 - 1 x Project Manager (12 Days)

Tasks & Deliverables

- Review customer questionnaire
- Detailed discovery / workshops
- Hands-on discovery and analysis
- Assessment tooling output
- Final presentation
- Detailed report with recommended next steps

MICROSOFT AZURE THE TEAM AND SKILLS

Public cloud adoption provides significant benefits and organisations can take advantage of these by selecting Microsoft Azure as a platform for hosting migrated workloads, building new applications and leveraging the many unique cloud services available.

Aligned to Microsoft's Cloud Adoption Framework, we consult, design and implement the solid foundations on which organisations can run their workloads in a secure and governed way, to ensure they maximise the many benefits of choosing Microsoft Azure.

DATA SERVICE PORTFOLIO

HARNESS THE POWER OF YOUR DATA

MODERNISE, INSIGHT, MANAGE

Through gaining awareness of their data we help customers understand its value to the business, improve processes, reducing time, effort and cost.

Our services help customers to leverage data through modern platforms, capabilities and data engineering techniques that are key to driving digital business, whilst at the same time ensuring that data is secure, compliant, highly available with reduced operational risk
