

CAMP 365 for Member Associations

CAMP 365 brings together all the association's membership data, finance functions and other association activities in one platform, and provides maximum overview, less administration and maximum security for data and operations.

When users draw or update data, it happens in the same database, so you avoid double registration and can more easily comply with the Personal Data Act.

CAMP 365 is continuously updated in relation to legislation, IT development and professional development in the association area, so that you always have the latest functionality available.

CAMP 365 builds on the Microsoft Dynamics 365 Business Central standard platform and thus fully integrated with Office 365 and other solutions from Microsoft and Microsoft partners.

CAMP 365 provides effective administrative tools for all functions of the organization

Member Self-service

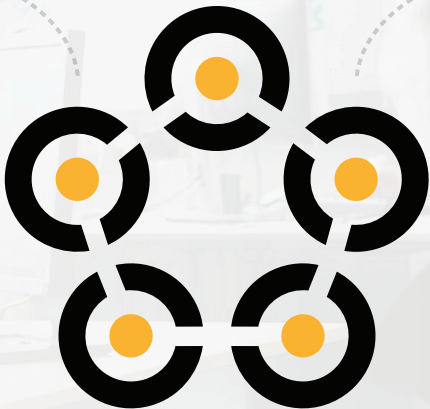

Via the module "Portal functions", CAMP 365 delivers real-time membership information to the association's website and gives members the opportunity for digital self-service functions such as: Registration for events, enrollment, view and quite own data and more.

Casework

WorkPoint 365 from WorkPoint A/S is based on Microsoft SharePoint and includes document management, managing mails, tasks and cases as well as the ability to tie it all together in workflows.

Management Reporting

The Business Intelligence tool Power BI analyzes data and visualizes reports. Power BI is cloud based, so you always have access to your data and reports - no matter where you are. You can monitor your data in real time and get notified on mobile or tablet, when something changes.

Communication

CAMP 365 contains powerful tools for managing member communication and accumulating knowledge about people or companies via: Website, News Feeds, Emails, Letters, Notes and Promotions.

Administration

The Microsoft Dynamics 365 Business Central ERP solution is the foundation of CAMP 365 and connects finance, sales, service and operations, through Microsoft's common data services.
