CRU – Applications Catalogue

Common digital gaps in delivering differentiated experiences

- Disparate systems often don't bring a single view of customer to staff
- Paper-based processes proliferate to address short-term needs but don't scale
- Difficulty matching customer needs to competent staff members

Common digital gaps in empowering employees

- Staff lacks actionable tools or leadership support to address areas of friction
- Legacy processes and specialized tools keep staff tethered to their desks

Common digital gaps in managing risk

- Reporting of issues is often verbal which slows correction time & risk elimination
- Regulatory & Legal guidance repositories are fragmented
- Hard to keep up with changes in compliance guidelines

AUTOMATION

STAY AHEAD OF THE HYPERAUTOMATION CURVE.

- Gartner recently identified hyperautomation as one of the top 10 strategic emerging technology trends of 2020. According to Gartner, hyperautomaton is "end-to-end automation beyond robotic process automation (RPA) by combining complementary technologies to augment business processes." Its emergence as a trend is tied to a combination of business and technology realities. The business reality is the need to remove siloes and seamlessly connect the data and information that an organization has across its different layers and business units. The technology reality is that solutions already exist to enable businesses to connect their data seamlessly. These two effects give rise to hyperautomation. Gartner believes that hyperautomation can be enabled by DigitalOps which they define as "a business process framework designed to simplify, measure, and manage processes across the enterprise." DigitalOps includes RPA, business process management (BPM), workflow engines, decision management suites, process mining, low-code application platforms (LCAPs), and others. Gartner's extensive research will help enterprise architects and innovation leaders to:

- Define an automation journey

- Co-create a strategy to combine DigitalOps tools

- Augment business processes with AI

CRU Bank Management App

The Bank Management App captures all data related to:

1. Customer Experience
2. Teller Services
3. People Soft Skills
4. Branch Look and Feel
5. Branch Support
6. ATM
7. Marketing Management
8. Process and Procedure Compliance

The App enables different business units to take instant action on compliance issues and also provides Business Intelligent dashboards to business leaders with drill down visibility.

Overtime Management App

Most organizations have the challenge of accurately managing overtime. The common issues are normally related to request duplication, inaccurate data and time consumed in verifying all details manually.

Our Overtime App digitizes all workflow and approval processes from the user to the designated approvers and this creates visibility that can be tracked through emails. The application can be customized according to the company requirements of the overtime process. A user logs onto the portal using a computer, mobile phone or tablet and populates the app. This triggers an email notification alerting the line manager of a pending request. The app also shows other hierarchical stages of approval the user must go through. Approvals/ rejection of requests are undertaken, and emails are generated per action. The app also has a reports generation capability which is crucial in analytics of the company's data. The BI functionality provides drill down dashboards visible to management for compliance.

Water Connection Application

This app captures water connection requests from users through a portal.

Customer can logon using a powerportal and register for a water connection request providing all relevant documents and detail.

This triggers a notification to the first approval stage on the powerapp. The user is notified what stage of approval their application is and approval/rejection notifications of their applications with reasons attached. Once an application is successful, a user is sent a bill and thereafter given a water connection. The application also enables the attachment of supporting documents.

Leave Management Application

Mobile App

This is an App that captures employee leave requests.
It runs on the power apps platform and can be integrated into Microsoft teams.
The app matches the dates requested by the employee against the official number of leave days designated by a company and approves or rejects the requests if the application is below or above the remaining official leave days respectively.
The app also considers approval levels, once a request is submitted it triggers email notifications to the assigned approvers.
