

Connected App

Description

We build end-to-end cloud applications that interact with physical endpoints or business systems. This might be a connected boat, garage door opener, factory automation, or customer service platform. We build on Azure PaaS, containers, and IoT platforms.

Who we Help

- VP of Development or CIO

Problem We are Solving

- Build a refactored or ground-up application
- Iterate associated with business value to customer
- Connected into existing business platforms, APIs, or IoT

Outcome of Offering

- Cloud Native application, possibly integrated with legacy platforms that deliver value to customer
- Business value being delivered and measured either internally or externally

Why Us:

- History of building ground-up applications with business value for customers
- 1 of 3 partners in the App Innovation and now Business Value Accelerator with Microsoft

Cost, Resource, Time

- \$250k - \$4m
- 3 – 12 months
- Architect, Engineer(s), SCRUM master

Next Step:

- Next Project: Connect App (next sprints)
- Next Project #2: Digital Ops
- Adjacent Project: App Modernization
