

## Redefining the Student Journey Through Digital Transcripts

### Key Benefits

Ensure compatibility with future technology and innovations

Reduce resource, admin, and financial costs from manual processes

Contribute towards green targets through a sustainable system

Enhance employability for graduates through digital readiness

Put students and graduates in control of their data

Cement a reputation as a forward-thinking establishment

Minimise employer risk by preventing fraud and widening talent pools

**The student experience has changed and, post-pandemic, universities face the challenge of matching digital transformation to the new future that lies ahead.**

The future is nothing if not digital; we've already seen universities pivot to remote and mixed learning at short notice, while embracing digital resources for students.

As we look to the new student experience and the challenges awaiting graduates, there's a clear opportunity for universities to marry their objectives through secure digital transcripts.

CondatiS and Microsoft have partnered to offer life-long digital transcripts – a portable, secure, and digital alternative to traditional, paper-based transcripts.

Digital transcripts empower graduates by giving them control to record and prove their academic achievements in just a simple tap of a screen, better positioning them to join the modern workforce of tomorrow.

We want to help universities lead the way in future innovations in education, provide optimal student experience, and influence employability beyond education.

## Who is It For?

Universities with long-term digital transformation goals, a focus on student employability, and areas of potential cost-saving

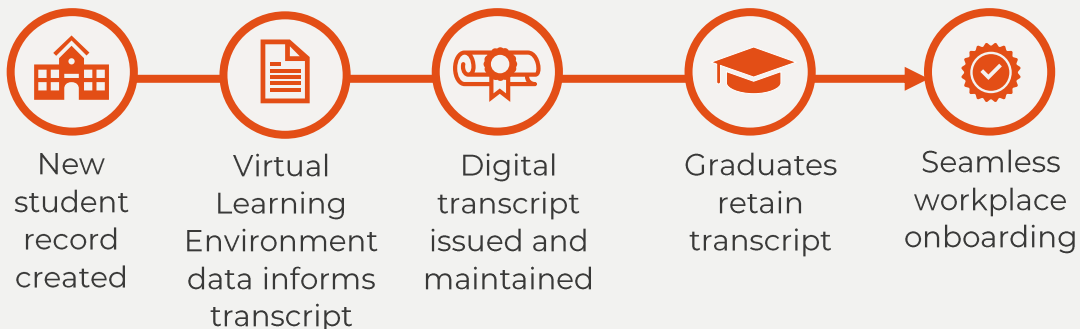

Employers undertaking academic programmes with universities

Students who need to prove credentials and qualifications

## What Does the Journey Look Like?

## Driving innovation, Together

Condatis is a Microsoft Gold Partners in Identity and Access Management, offering customers a one-stop-shop for their IAM needs.

We have a long term relationship working with Microsoft Product Group extending Microsoft Identity capabilities and redefining external identity experiences.

Together, we're introducing Microsoft Azure AD Verifiable Credentials for Higher Education. Our aim is to streamline student onboarding and digital credential portability, enable future transformation, bolster employability, and redefine how students carry qualifications and transcripts through their entire student lifecycle and beyond.
