

# Legal Professionals Need A Solution For Modern Security & Privacy Risks

Privacy and Compliance for the Distributed Age

Security and privacy solutions have failed to keep up with the evolving collaboration tools used by today's legal professionals and present a risk to the profession. According to the ILTA 2021 Technology Survey, trends seen across law firms both large and small indicate increased risks to data security: almost 50% of firms allow externally shared documents through Microsoft Teams; 74% of respondents say Office 365 will be their primary office application within 12 months; and 95% of lawyers now use laptops rather than desktop computers. Perhaps most troubling, almost 40% of firms do not enforce encryption on shared documents.

These factors present myriad risks to firms. Redaction failures continue to be a source of embarrassment. The unintentional or malicious distribution of sensitive information can result in lost revenue, reduced client confidence, malpractice lawsuits, and professional discipline. Legal professionals need a better solution!

## Confidential - Rethinking the sharing of sensitive information

With **Confidential**, organizations can automatically discover and protect sensitive information throughout the life cycle of documents using *selective encryption*. Its core technology, based on military-grade cryptography, secures access to sensitive information shared **inside** and **outside** the enterprise, using your favorite business applications and tools.

### Existing security tools are

- Hard to use
- Difficult to scale
- Poorly equipped for modern collaboration tools
- Rely on human intervention
- Ineffective outside the organization
- Useless against insider threats

### They leave you exposed to

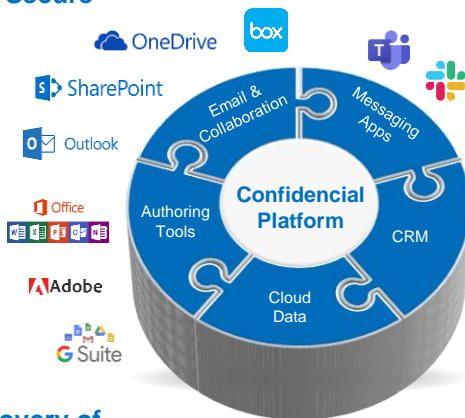

- Rival firms
- Outside agents
- Malicious insiders
- Unintentional insiders
- "Hacktivists"

### Resulting in brand damage

- Lost revenue
- Client confidence
- Waived attorney/client privilege
- Malpractice lawsuits
- Professional discipline
- Public relations fallout

### Integrates with Existing Applications

#### Seamless & Secure

### One Tool for All Your Security Needs

### Simple & Intuitive

### "One-Click" Encryption

### Automated Discovery of Sensitive Information

### Desktop, Mobile, & Browser Support

### Audit & Monitor

Confidential is a ventured-backed company originally incubated at SRI International that is commercializing technology developed under DARPA-funded research. The team consists of enterprise software executives and SRI researchers with deep expertise in the security and privacy of distributed systems.
