- Speed
- Heading

Technical

- DTC Codes
- Odometer
- Service
- Oil

Handling

- Turns
- Breaking
- Acceleration
- RPM
- Idle time

Connected Cars Telematics device

- Main advantages

Built specifically for VAG

→ Delivers deep technical data

SIM card / Connected to GSM/LTE network

→ Always deliver data

5-minute installation

→ Perfect for retrofitting

Hidden behind the dashboard

→ Stays in the car for its lifetime

General on Telematics Device and Connected Cars:

“Our hardware have some great capabilities and enables us to extract valuable deep dive data from the vehicles to the benefit of the user and workshop.

The Hardware isn't better then the FW and configurations that are installed on the device. Our hardware device is developed especially to VAG and so is our FW and configurations. That means, we have built a scalable setup that are capable of extracting deep technical data from VAG vehicles. Including deep maintenance data, deep error codes, warning lamps, fuel level and consumption, driving behaviour, battery level etc.

Furthermore, our device management system enables us to expand the data coverage, frequency etc. if specific use cases arises.

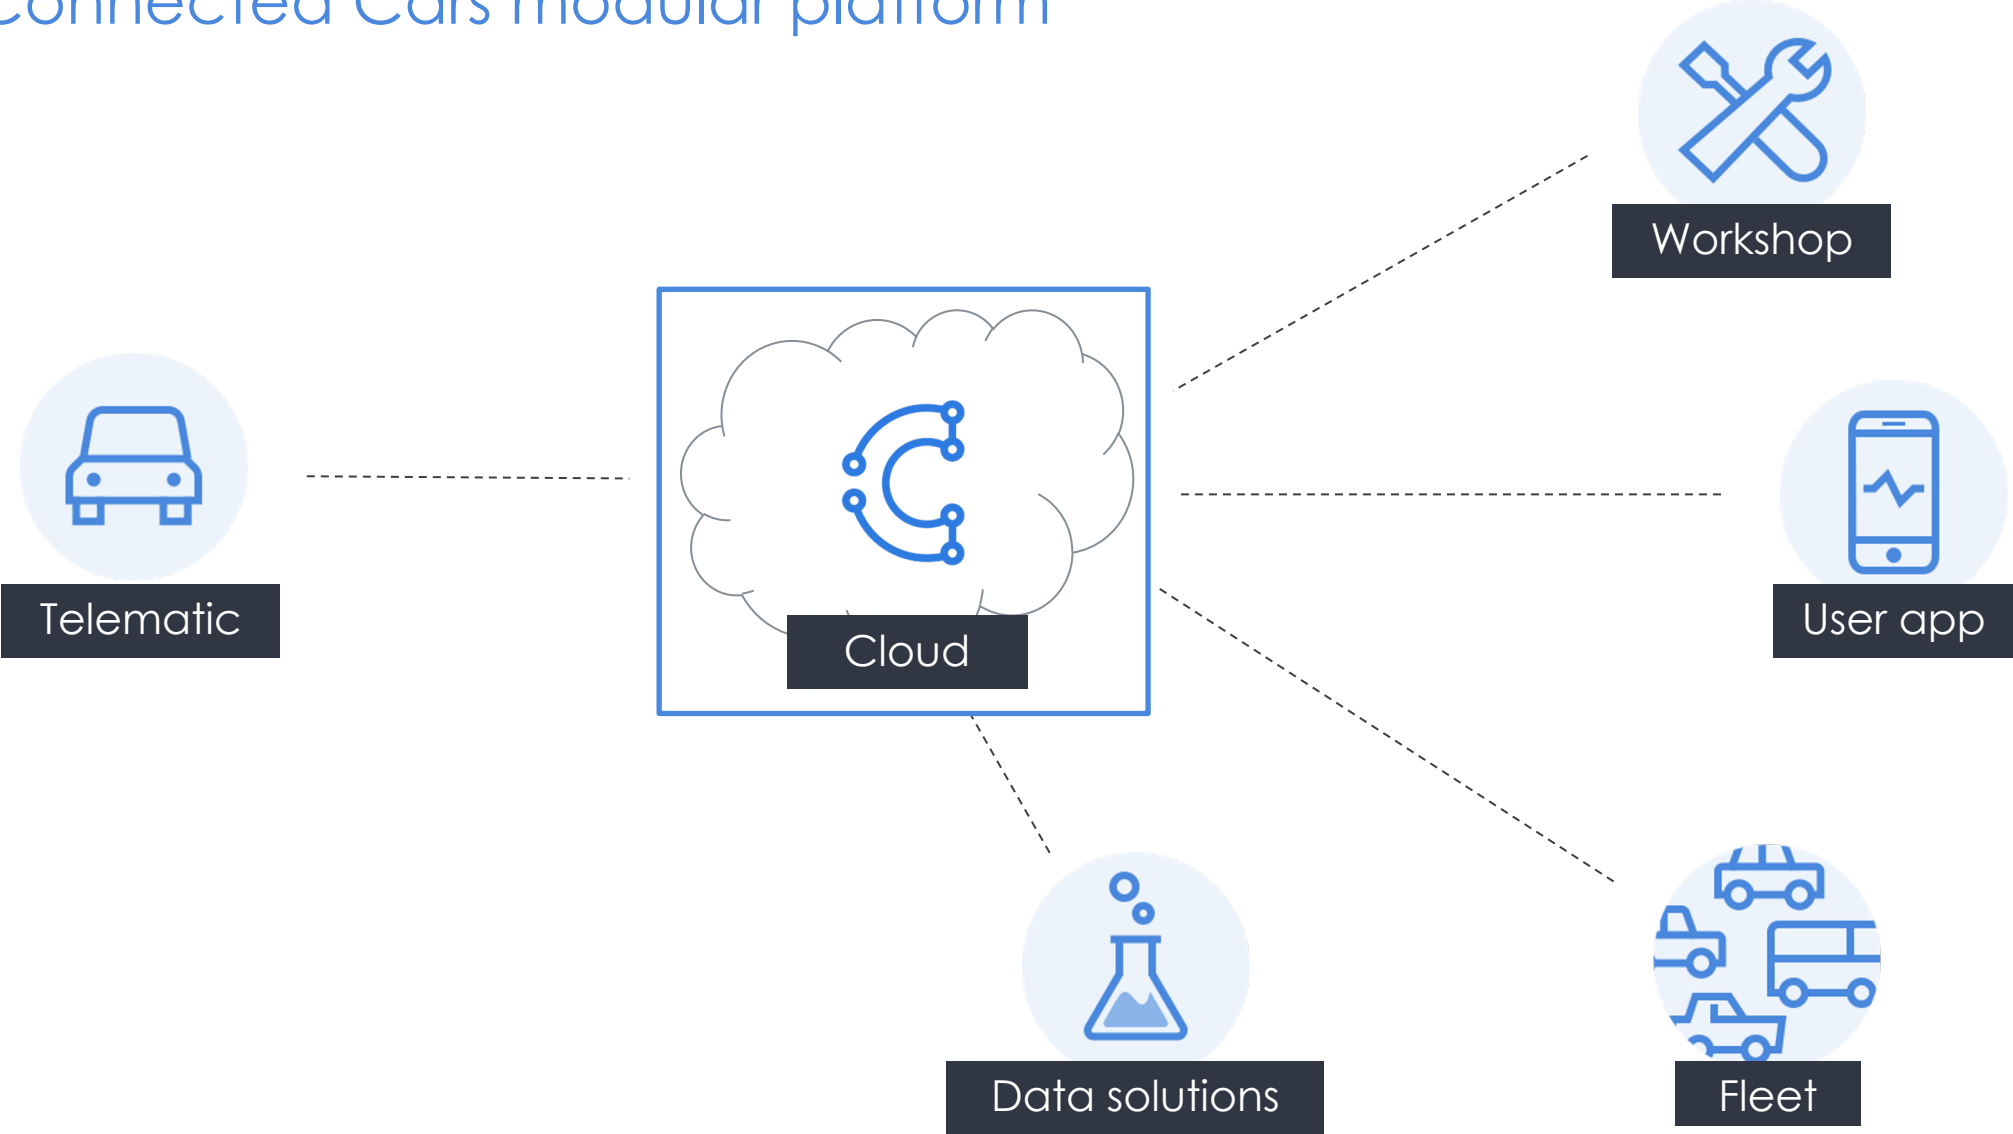

Products

Connected Cars cloud and
Device Management System

Connected Cars modular platform

Connected Cars Cloud

- Main advantages

Scalable

→ Capable of handling real-time data from millions of cars

Flexible

→ Capable of handling various data inputs, real-time

→ Currently running on Google Cloud, can be hosted on AWS or Azure as needed

Secure and compliant

→ End to end encryption and SSO logins

→ GDPR compliant and comprehensive consent management system

Documented

→ Open APIs for integrations

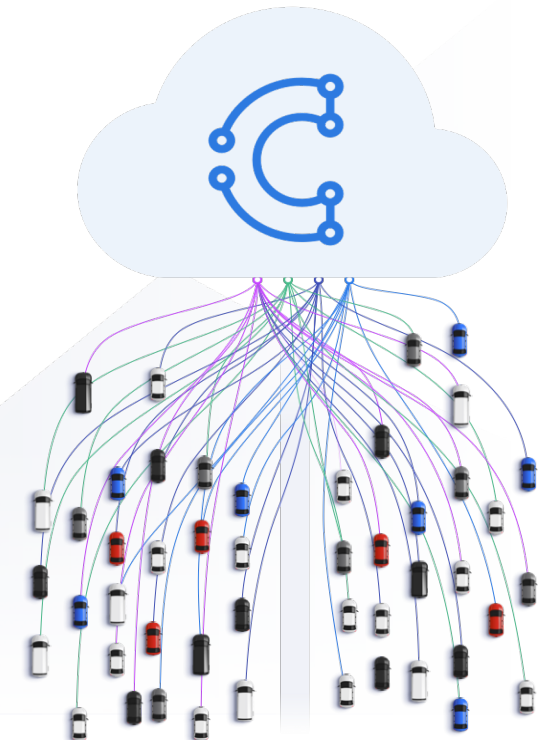

General on platform and Connected Cars:

Every importer, dealer and user has different requirements, needs and expectations.

The Connected Cars Cloud and device management system is built to be flexible so it can easily be customized to local and specific users needs. This includes local GDPR regulations, needs for integrations to DMS systems etc.

The Connected Cars cloud is built with an open approach which allows the importer to get access to all data collected on their customers so it can be used to different purposes outside the Connected Cars environment. For example to drive custom marketing campaigns in Salesforce, calculate dynamic service- or leasing agreements etc.

But the telematics cloud is just an enabler, that makes the value creation possible. Going forward many cars will be equipped with hardware from the factory, and the Connected Cars cloud is made to work with data from many different data sources.”

Screenshot: Device Management System – FW and configurations (Admin tool)

The screenshot displays the 'Overview' page of a Device Management System. On the left is a navigation sidebar with icons for Debug, Overview, Basic, Service, Oil change, Unit, and Reverse engineering. The 'Overview' section is active, showing a 'Go to details' button. The main content area is divided into 'Vehicle details' and 'Unit details' sections.

Connected Cars Workshop

For the workshops / dealers, Importers and OEM

Connected Cars modular platform

Connected Cars Workshop tool

- Main advantages

Intuitive lead overview

Collection of marketing consents

Live status of all customers

Easy chat with customers

Integration to existing systems

Proven and solid business case

→ Get an easy overview of what you need to handle and when

→ Get valuable marketing consents from all customers

→ See a unique live status on all customers vehicles

→ Save time and money by moving customer dialogues to chat

→ Automates the experience even more

→ Connected Cars Workshop tool helps dealers to significantly increase customer satisfaction and aftermarket revenue

The screenshot displays the 'Vehicle details' page for a Volkswagen Amarok. On the left, there are sections for 'General', 'Vehicle details' (including chassis number, license plate, and mileage), 'User' information, 'Workshop' location, and 'Service' reminders. On the right, a chat window is open with a customer named Michael Garcia, showing a conversation about a warning light and a technician's response.

This screenshot shows the 'Vehicle details' page for a Volkswagen Amarok, focusing on the 'Alarms' and 'Incidents' sections. It lists several incidents such as 'User reported the electronic parking brake lamp is on', 'Warning lamp detected on exhaust system', and 'Unit disconnected'. A chat window on the right shows a conversation about a warning light and a technician's response.

The screenshot shows the 'Leads' overview page, displaying a table of 'All acute leads'. The table includes columns for license plate, model name, issue, potential revenue, customer name, and customer phone. The total number of acute leads is 124,833.

Right flashing in this car. I see Do we need to fix this now

Rasmus, This is a pretty severe error that we need to inspect so it doesn't lead to something worse. Just leave the car with us this afternoon and we'll take it from there. Have a nice day! Best, Adam PS

Alright. Sounds good! I'll stop make sure the car is dropped off later today. PH

Great! Thank you. PS

Conversation closed by Peter Sørensen

It seems like there might be a problem with the brakes on this car. The lamps keep turning on and off periodically. PH

Hi Peter. Yes, it looks like you might be having a problem. Let me just check up on that with one of our technicians. I will get back to you as soon as we are done diagnosing the problem. Jørgen Bentsen - 09:01

Screenshot: Customer chat portal

The screenshot displays a customer chat portal interface. On the left, a list of chat threads is visible, each with a customer name, a timestamp, and a license plate number. The main chat window in the center shows a conversation with a customer named Lemminkäinen (+driver) AB23678. The chat history includes messages from Paul Henningsen, Arne Jørgensen, Rasmus Hansen, and Peter Henriksen. A dropdown menu for assigning a teammate is open, showing options for Me, Arne Jørgensen, Gunnar Pedersen, and Jørgen Bentsen. The right sidebar provides conversation details, including participants (Fleet Manager Adam Jørgensen and Driver Peter Henriksen), workshop information (Volkswagen Gladsaxe), and vehicle details (Chassis number WWW2223CZHE123, License plate AB12345, Model VW MOVE UP! 1,0FSI 60HK..., Year 2018, Mileage 24.837 KM, Last service 600 km / 9 days, Service interval 30.000 km / 730 days). At the bottom, there is a text input field for replying to the chat and a 'Send' button.

General on the App:

The Connected Cars app gives the workshop the opportunity to be in direct and proactive contact with the customer. It also gives the dealerships and importer the opportunity to localize the experience to make it fit the local needs better than a “one size fits all” factory solution offers.

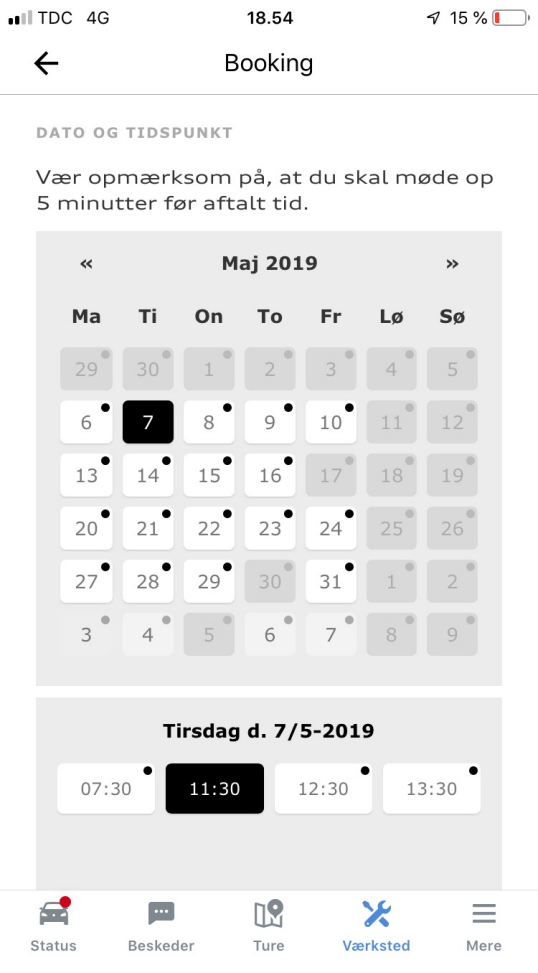

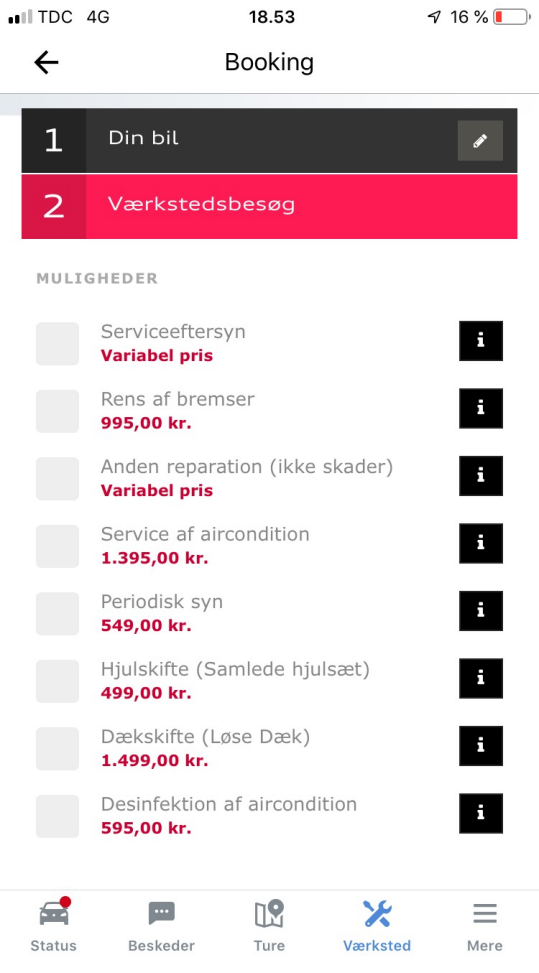

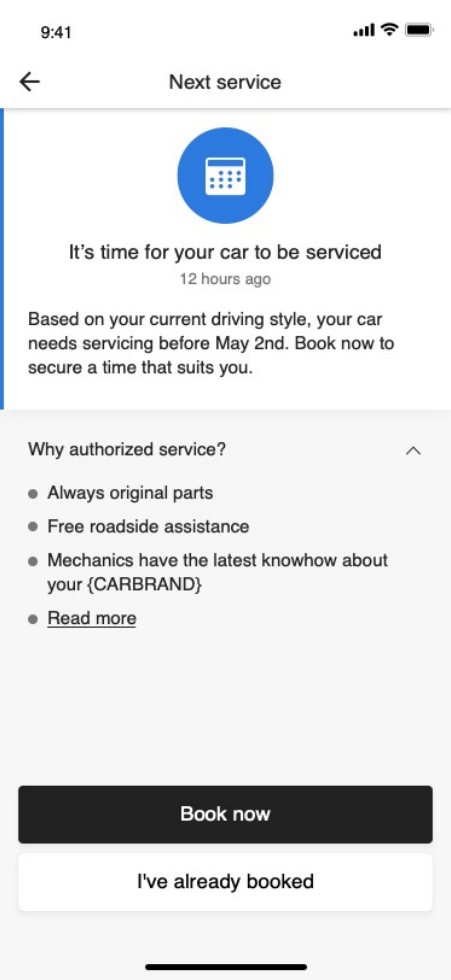

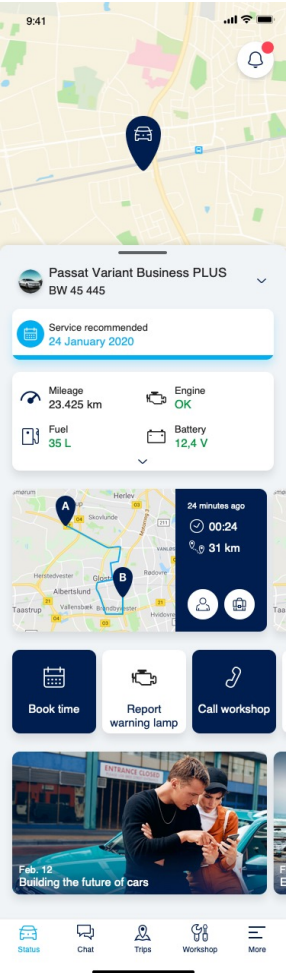

The Connected Cars app can work perfectly alongside the factory provided apps.

General on the Fleet Tool :

The Connected Cars Fleet tool, gives the workshops a great opportunity to get even more customers connected to their workshop and thereby make them more loyal.

*Beside this, the sale of the fleet tool gives the dealers/importer a great opportunity to earn some extra money on the sale of the license, as it has been offered for **FREE** when the car is connected to the Workshop tool.*

Screenshot: Export trips

The screenshot shows a web application interface for vehicle trip history. A modal dialog box titled "Export trips for vehicle 'CA51786'" is open in the center. The dialog has a "Date range" section with a date picker set to "03/10/2019" to "04/09/2019". Below this is a "Select fields to export" section with a grid of checkboxes for various data points. The "Download trips (CSV)" button is highlighted in blue. The background interface includes a map on the left, a "Details" section at the bottom left showing trip statistics (Distance: 109.6 km, Time: 1h 55m, Idle time: 10m 6s, Average speed: 57.2 km/h), and a "Trip history" table on the right with columns for location, distance, and time.

Dennis Franzeen changed workshop to Volkswagen Gladsaxe

Vehicle activated by Dennis Franzeen

Jan 15, 2019

Conversation opened by Henrik Hansen

Kære R.K. Teknik, jeg kan se i vores system at du har en motorlampe som lyser i displayet på din bil, som stadig skulle være aktiv. Har du behov for hjælp er du velkommen til at kontakte os. Mvh Henrik / Volkswagen Gladsaxe

Products

Connected Cars Data Science / API

Connected Cars modular platform

Connected Cars Data Science / API

Core functionalities / benefits

Fully documented API's

→ Easy integrations to other platforms, fleet systems

Build integrations to 3rd parties

→ for app partnerships

Build integrations to other clouds

→ if a customer has only bought out HW + Platform, and no frontend

Predictive maintenance analysis

→ Build predictive maintenance functionalities for Fleet, Workshop and app

Constant data quality reporting

→ to spot abnormalities immediately

Data scientist solutions on request for customers:

Traffic analytics

→ Analyse traffic patterns for the government

Insurance algorithms

→ Enrich the insurance companies algorithms
