

CB Exchange Server Sync

Synchronize multiple Microsoft Office 365/
Exchange/ Outlook/ Gmail accounts

What is CB Exchange Server Sync?

CB Exchange Server Sync is the solution for secure synchronization and migration of data between Exchange Servers. It enables easy synchronization of multiple Outlook accounts hosted in Microsoft Exchange Server, Office 365 or even Gmail / Google Workspace.

It can be used for one-way or two-way synchronization of calendars, emails, tasks, contacts, and public folders.

This solution supports seamless migration of your entire Exchange / Outlook model. Office365, and all Exchange Server versions from Exchange 2010 SP1 are supported, as well as Gmail / Google Workspace.

Use Cases

- Mergers & Acquisitions when two or more companies have their mailboxes with different versions of Exchange, different domains or tenants
- Joint ventures where multiple project groups need to collaborate over a long period of time
- Consultancy companies where consultants have mailboxes with several clients
- For managing shared resources like conference room booking between different Exchange servers

Why customers use CB Exchange Server Sync

- Easy to use: define mailboxes to sync and the rest is done for you
- Define origin and destination accounts or even synchronize both ways
- Choose exactly what to sync: calendar, contacts, emails, folders or even tasks
- Synchronize metadata like categories
- No more overlapping bookings or missed appointments. Keep it all in one calendar, even recurring events
- Synchronization is server-side, so changes are not dependent on specific devices
- No admin privileges needed on Exchange servers

✓ API only

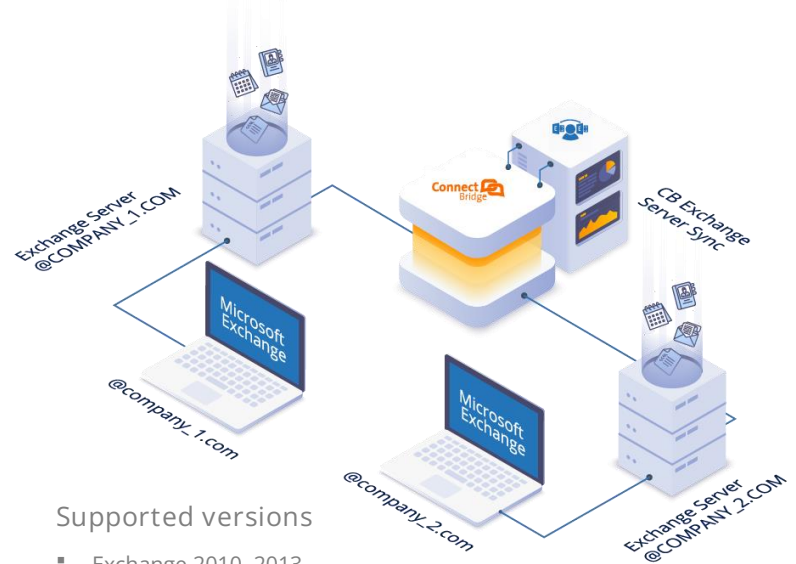

✓ No backend access

✓ Safe and secure

How does it work?

CB Exchange Server Sync can be installed on-premises or in the cloud. It's a unique software that allows real server-side synchronization, and not only syncing a client with a mobile device.

This tool uses a Windows-based service which performs the synchronization. It runs in a non-blocking mode with Exchange. Therefore, it does not influence the general performance of Exchange – no downtime for your mailbox. Easy user interface is available with options to customize the sync process.

Supported versions

- Exchange 2010, 2013, 2016, 2019, Online
- Office 365
- Outlook
- Gmail and Google Workspace

Key Features

Security and Confidentiality

You don't need to show a completely populated calendar to anyone. With CB Exchange Server Sync, you can indicate you are busy at a particular hour, but not inform people what exactly your appointment is about. Data integrity is ensured with secure, encrypted connections.

Synchronization and migration of Outlook accounts

Your data is synced to the server, not in the client or device you use. For teams in various locations, the service ensures access to up-to-date information, at all times. Supports migration of complete user mailboxes & data, with no effect on user settings or data, and zero downtime.

Sync Hotmail, Outlook.com Accounts

Are you using Hotmail or Outlook.com mailbox? Sync it with your Exchange Server, Office 365 Outlook mailbox, Gmail and G suite. Since Hotmail, Outlook.com was bundled into the Office 365 suite, you can use our service to sync your Outlook.com mailbox. Merge your personal Outlook account with your work or school account automatically.

Fully customizable controls and features

Easy-to-use graphical user interface enables you to configure the synchronization options, such as the synchronization period, items to synchronize and more. The synchronization process runs in parallel with Microsoft Exchange services and has no impact on the performance of Exchange Server.

Benefits

Cross-domain synchronization

SaaS or Self-hosted

On any client interface

Flexible customization

24/7 Real-time Synchronization

Easy-to-setup & use

Add-ons

CB Super Secure Exchange Server Sync

CB Super Secure Exchange Server is the solution to prevent hackers from using Exchange Server as an entry point to a secure network. The solution allows people to access their Exchange/ Outlook mailbox items outside the local network without any problem of getting hacked. This is the solution for the Exchange environments of high-security enterprises and public sector organizations.

Security: Isolating your Corporate Exchange Server from the outside world dramatically reduces vulnerability to attacks.

Validation Rules: Gateway-formatted messages (rows, columns) simplify content validation rule creation.

Maintenance: Adapting to evolving business needs and data regulations centrally through the Gateway is quick and straightforward.

No direct calls: No "direct" EWS calls from one network to another.

Exchange/Outlook Data Filter

Exchange/ Outlook Data Filter allows you to control what is made available to users in a second Exchange Server.

You deploy it on your own environment (self-hosted) and tailor it precisely for your unique business requirements:

- Include only mailbox items (events, tasks, contacts, messages) that meet certain criteria using exclusion or inclusion filters
- Additionally, for calendar items only:
 - Hide part of the item, like the attachments or meeting participants
 - Add a suffix to show the item came from the other server

CB Global Address List Sync

CB Global Address List Sync is the tool to automatically synchronize your Global Address Lists (GAL) on two different Microsoft Exchange Server. The GAL is a comprehensive list of all users and resources like meeting rooms.

Keeping two GAL in sync means that users in both Exchange Servers will have the same "address book" available when composing messages. This simplifies email communication and is useful for:

- Mergers and Acquisitions
- Partners
- Group of Companies

Exchange Connector

The Exchange connector for the Connect Bridge integration platform lets you easily get any information you need from Microsoft Exchange Server into any software or database.

You will be able to this much faster and without spending countless hours studying the documentation of Exchange Server and its API.

This connector lets you get all types of Microsoft Exchange information, and it also lets you get information into Microsoft Exchange, if necessary, without any compromise on data integrity or security.
