ID Scanner

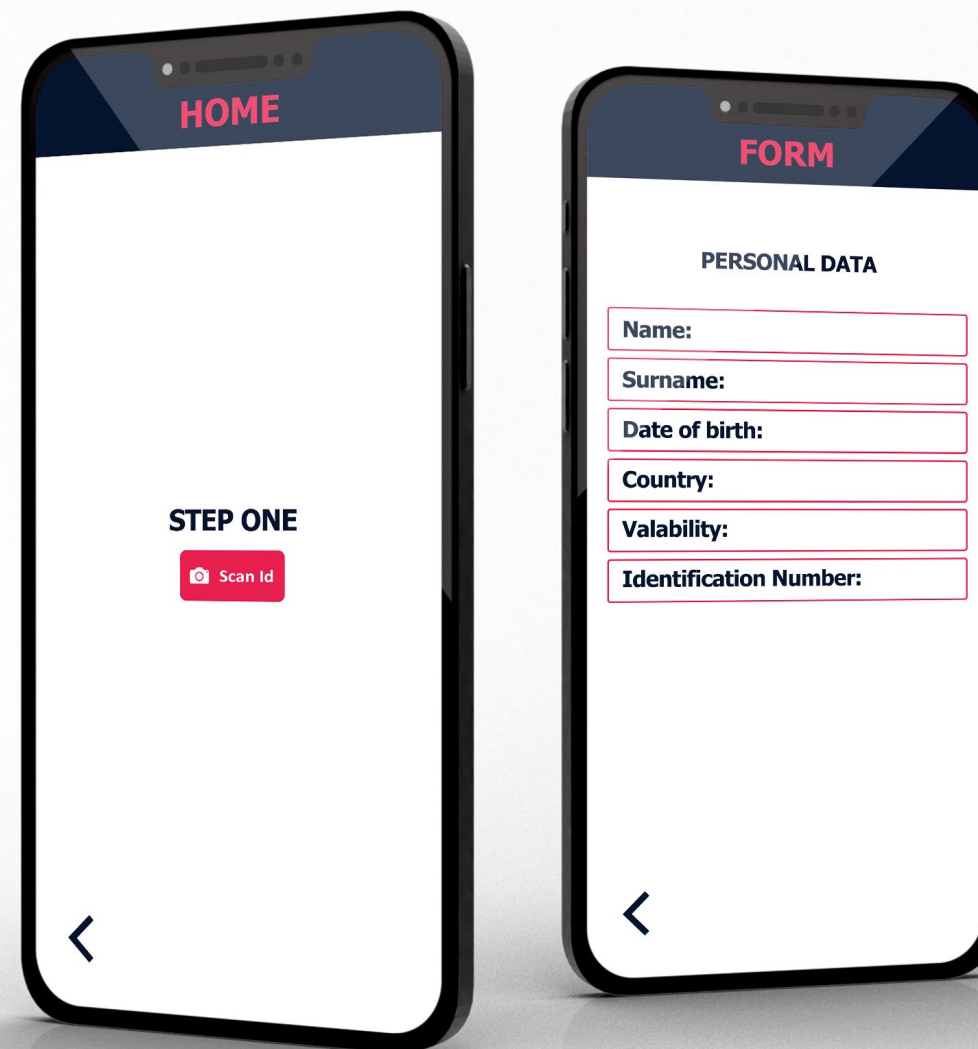

About ID Scanner

ID Scanner is Connections Technologies' newest application that allows you to digitally extract data from any type of document with a simple photo.

The integrated AI technology allows data to be extracted from all types of documents, including untyped ones.

ID Scanner ensures maximum data protection, which is why all documents are processed in a virtual environment.

ID Scanner Usage

ID Scanner is a highly secure and flexible component that can be easily integrated into any IT system.

The ID Scanner application can be used in customer onboarding processes in various industries (banking, telecommunications, energy, insurance), contract generation workflows, or any other automation processes.

Enrolling customers

Contract Completion

Visitors registration

Data update

How ID Scanner works

Pasul 1 - Make sure you have saved your document in the requested format.

Pasul 2 - Upload the document for which you want to extract data.

Pasul 3 - Use the extracted data for the use of your choice.
