The Challenge

Many customers struggle to keep up with updates released for Azure or Microsoft 365. Consera's update management, developed by cloud administrators for cloud administrators, addresses this issue. We review, categorize, and document updates for cloud services within the Microsoft ecosystem. Customers can mark or comment on updates and provide feedback during implementation, allowing others to benefit from early information. We also offer short videos on how to implement specific updates or what changes are included in the update itself.

Technical Details and Cloud Service Integration

Consera is a SaaS application distinguished by its easy integration into existing systems. The basic technical requirement for using consera is adding the Azure Tenant. This allows for seamless connection and integration with Microsoft Cloud Services. Through this connection, consera can efficiently access the latest updates and changes in Azure and Microsoft 365, enabling timely and effective update management. This simple and accessible setup makes consera particularly appealing for businesses looking to update their cloud services without complex technical barriers.

Brief Portrait

Consera GmbH is a company specializing in providing cloud update management solutions. They offer services specifically designed to assist IT professionals in managing and implementing updates for Microsoft Cloud Services, such as Azure and Microsoft 365. Through their platform, Consera.io, they enable efficient monitoring and categorization of updates, facilitate feedback processes, and provide informative resources, including short implementation videos. Their approach aims to simplify and optimize the updating of cloud services. For more information, visit https://consera.de
