

Innovati

Nati

Nati is a digital assistant, designed to respond to massive customers of a organization, with friendly manners. Nati is adaptable to every brand requirement, not only the appearance, but also it's personality, the speech and the channel of service. Nati is composed of two main components, the Software itself and an interactive kiosk in which it runs, to grab attention in public environments.

FEATURES

- Conversational capabilities with a talker, it can listen what he says, understand the message and give a relevant answer
- Face recognition and emotion capacity
- Antropomorphic tridimensional figure with realistic corporal movements
- Customizable personality with emotion expresions
- Conecivity to any information system of the organization for giving precise responses to user needs.

DESCRIPTION

Nati is a Software which integrates Natural language processing (NLP), 3D animation, artificial intelligence divided in backend developed with an architecture based in microservices, and a frontend developed in a ggraphic engine allowing character and scenario rendering.
