Azure VMware Solution Accelerator for Enterprise

8-Week Implementation

Extend or migrate your existing VMware Data Centre environment seamlessly to Microsoft Azure with Azure VMware Solution (AVS) and Advania

For commercial enterprises, technology implementation must be synchronised with complex objectives, showcasing transparent return on investment.

Migrating to the AVS enables businesses to leverage their existing technology investments while accessing new opportunities for innovation.

Our fully project managed, and proven AVS accelerator methodology coupled with collaboration with your internal teams will ensure that the business and technical objectives are clear for all stakeholders before project activities commence.

In 8 weeks*, we will deliver your AVS environment integrated with your on-premises data centre and conduct a pilot migration wave with performance testing to ensure your team is positioned for successful ongoing migrations.

What our AVS Accelerator gives you

- **Seamless integration:** AVS is a comprehensive cloud service delivered by Microsoft in close partnership with VMware. It allows businesses to run their existing VMware-based workloads on Azure without any significant changes, preserving their investments in existing skills, tools and processes.
- **Scalability and flexibility:** With Azure, businesses gain the ability to scale resources up or down depending on demand, leading to more efficient use of infrastructure and potentially significant cost savings.
- **Access to advanced Azure services:** By migrating to AVS, businesses also get access to advanced Azure services such as artificial intelligence, machine learning and analytics, which can drive innovation and competitive advantage.
- **Improved business continuity:** The robust disaster recovery solutions offered by Azure ensure that business operations can continue uninterrupted even in the event of an outage or disaster.
- **Security and compliance:** Microsoft invests over a billion dollars each year into security research and development, making Azure one of the most secure platforms available today. Businesses can benefit from multilayered security across physical data centres, infrastructure and operations in Azure.
- **Cost optimisation:** By moving VMware workloads to the cloud with AVS, businesses can reduce their overall IT costs by eliminating the need for capital expenditures on hardware refresh cycles and reducing operational costs with automated management capabilities.

Why choose Advania?

As an Azure Expert MSP, Advania is authorised to manage your application for the Azure Migrate and Modernise programme for AVS to bring skills building, cost-effective offers and incentives (be it subsidised services or Azure credits) which will help offset transition costs.

We hold Microsoft's Azure VMware Solution specialisation, assuring you of the highest standards for Azure service delivery and support. And with expertise across Microsoft 365, Security and Business Applications, we're also able to support your broader digital transformation journey with Microsoft technologies.
