

Hybrid Windows for a hybrid world

Windows 365 (W365) provides users with a dedicated and persistent Cloud PC for use in a wide variety of scenarios. Built on Azure Virtual Desktop and delivered and licensed as part of the Microsoft 365 suite, Windows 365 leverages all the cloud-based Modern Management tools within the Microsoft 365 product suite to enable simple deployment and management of Cloud PCs.

Content+Cloud was the only UK Microsoft partner to support the Private Preview of Windows 365, and we have been working with clients to support user needs in innovative ways with Windows 365 since its launch.

Windows 365 FastStart Deployment

Content+Cloud was the only UK Microsoft partner to support the Private Preview of Windows 365, and we have been working with clients to support user needs in innovative ways with Windows 365 since its launch.

Through this 6-day engagement, we to assess the suitability of Windows 365 in your technical environment, identify use cases with you and deploy a pilot of Windows 365. The engagement is designed to deliver the following:

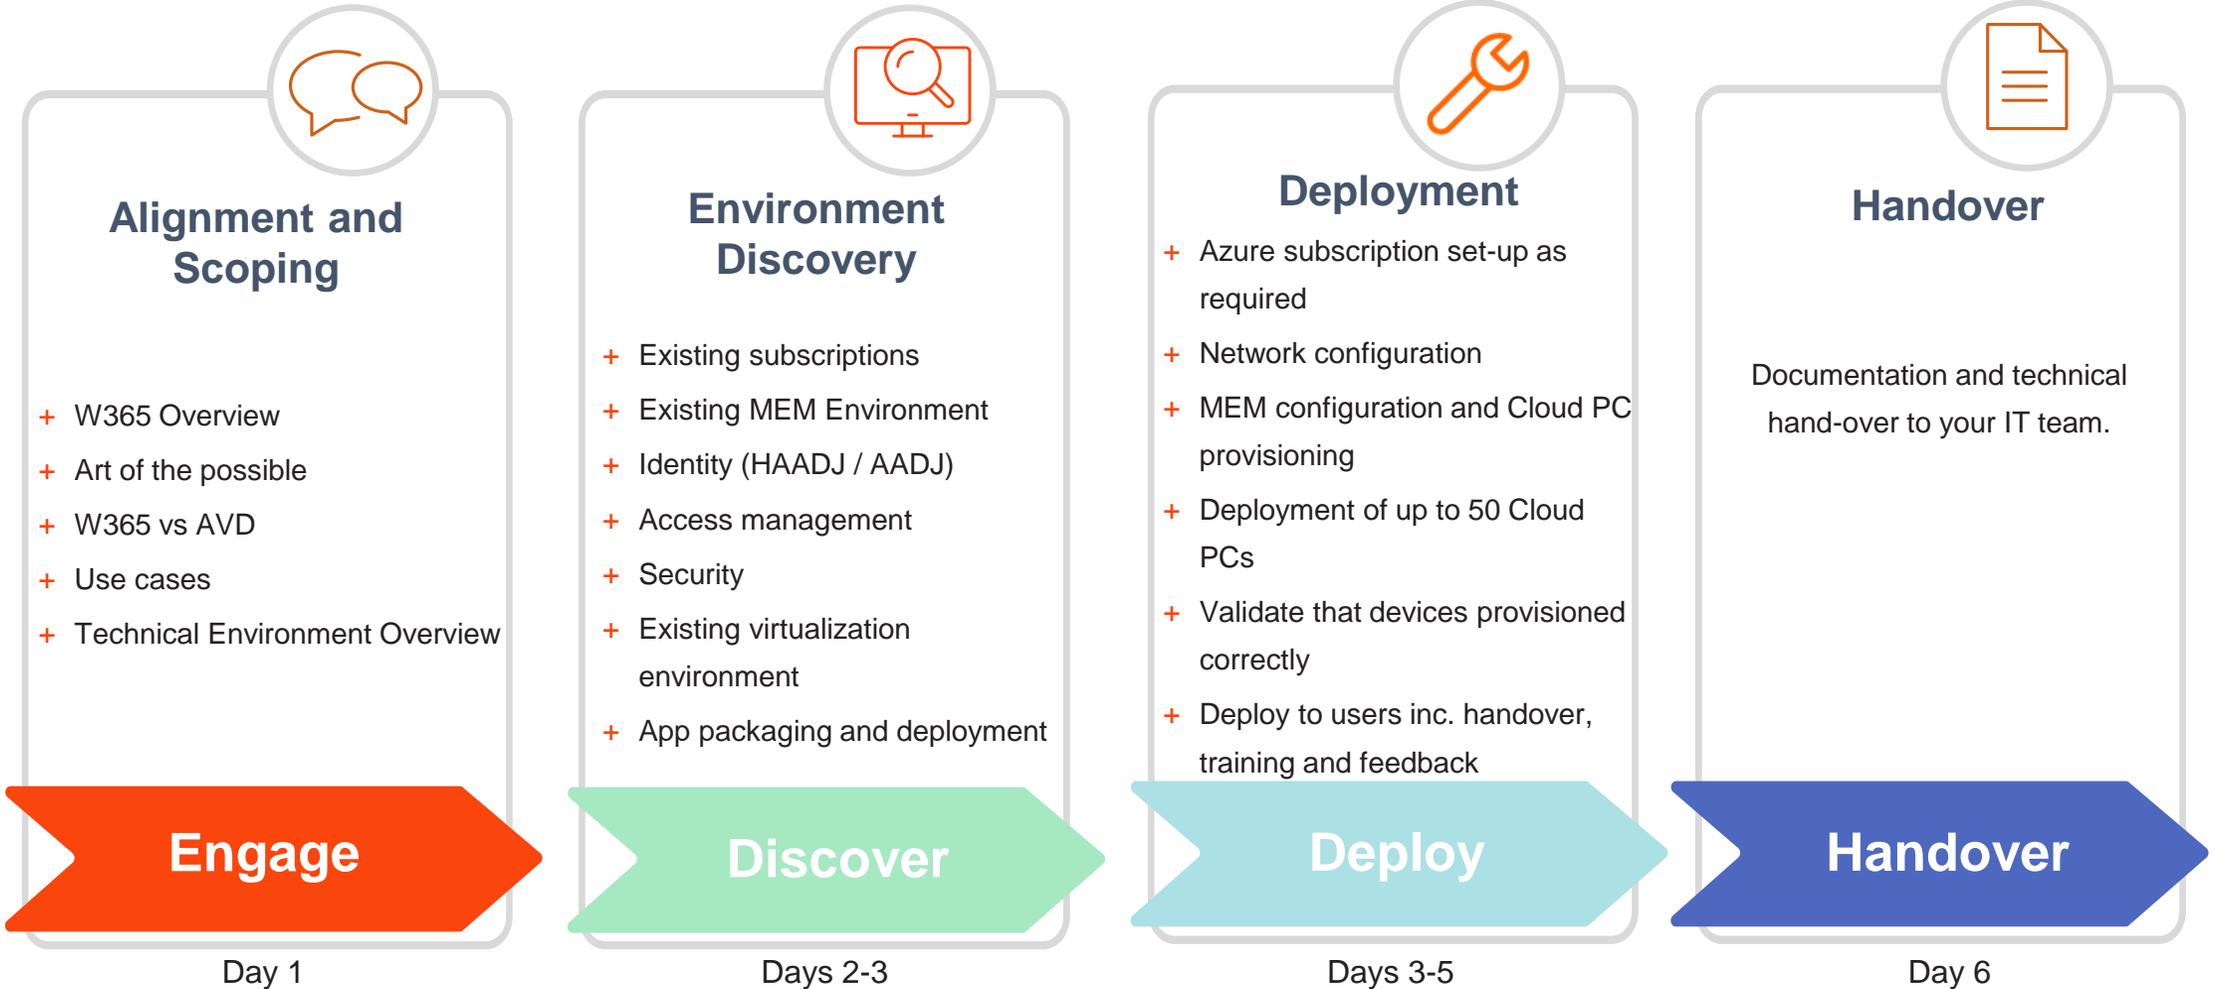

- + A chance to understand this important new technology from Microsoft
- + Identify use cases for Windows 365 in your organisation
- + Prepare your technical environment for the deployment of Cloud PCs
- + Deploy a pilot of Windows 365 to up to 50 users
- + Technical documentation and handover
- + Understand the next steps use and scale

Windows 365 FastStart Deployment

Understand the Art of the Possible with Windows 365 and deploy Cloud PCs to a pilot set of users.

+ Typically 6 days of total work (subject to confirmed scope) with approx. 3 half days in customer workshop
