

# CONCEPT STUDY INTERACTIVE REPORTING WITH POWER BI

Gain insight into your data with Power BI

## WHAT

Are you looking for a way to collect numbers and use reports and dashboards to **process those numbers smartly**, in order to gain/provide insight and know that your organization is making the right decisions? With Power BI, we create **dynamic, up-to-date reporting**.

During this concept study with a **focus on Power BI**, ConXioN has a thorough conversation with your project team, which usually consists of managers and key employees. We start off with an **inspiration session** where we show the key features and possibilities of Power BI, such as intelligent analysis, endless integration possibilities, intelligent data visualization ...

After that, our consultants determine the **current situation (AS IS) for each type of end user**. We put our heads together about how it can be optimized. We look at the current way of working, existing data and any tools that should be connected.

The **desired future situation (TO BE)** is also extensively analyzed. Which functionalities suit the organization best? Which visualizations are needed, what insights do you want to capture and display? Which integrations are desirable? How do we ensure that the different users can draw conclusions based on the results?

For this analysis of the AS IS and TO BE situations, we map out both the strategic vision as well as the functional needs to get a clear view of the organization and the process. We also carry out a **technical analysis**: which solution matches the overall picture and your expectations best?

## Key points

Analysis of the AS IS/TO BE situations

Mapped out process

For every type of end user

Functional, technical and organizational

## WHY

Usually, the best technical solution or a ready-made solution is not enough. As an employee and as an organization, you also need a **solution that fits like a glove**. That is why, from the onset, we focus on the **end user** and **on change management**: a solution the end user does not use is just a waste of your time and money.

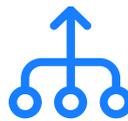

Hence **the importance** of this concept study. The thorough preliminary investigation prevents bad investments, and the result makes it possible to make the right decision.

## 5 benefits

Tailor-made solution

Focus on the end user

No unnecessary costs

Detailed estimate

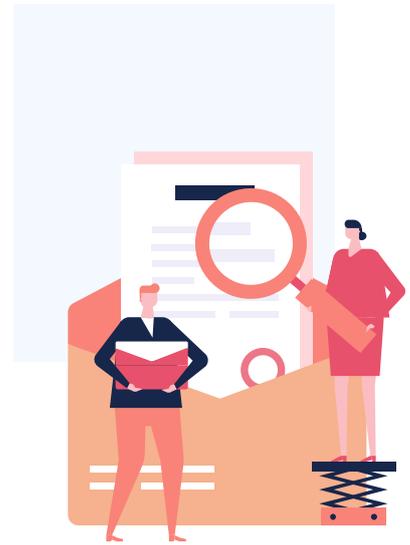

Clear roadmap

## HOW

During the concept study, we investigate how to close the gap between the AS IS and the TO BE situations. We propose a suitable **functional and technical solution**, including a **detailed quote** and **roadmap**.

We take as much account as possible of the end users and their possible resistance to the proposed changes. That is why this concept study also includes an **adoption workshop** in which we discuss how the **communication, documentation, training** and **support** of the end users is best done in your organization. This adoption plan is also included in our proposal.

## Deliverables

**Analysis of the AS IS/ TO BE situation**

**Quote with a description of the concrete solution, including pricing and timing based on the concept study**

**Adapt session Power BI**

**Adoption workshop**

**Adoption plan**
