

Give your processes a boost with the Power Platform

WHAT

Do you want to **accelerate your current way of working**, work more efficiently and automate manual operations as much as possible? During this concept study with a **focus on the Power Platform**, ConXioN has a thorough conversation with your project team, which usually consists of managers and key employees. We start off with an **inspiration session** where we show the key features and possibilities of the Power Platform.

After that, our consultants determine the current situation (AS IS) **for each type of end user**. We put our heads together about how it can be optimized and map out the business process with all possible stakeholders and related data.

The **desired future situation** (TO BE) is also extensively analyzed. How do we ensure that the information gets to the right place as soon as possible? Is there a need for other software integrations? Of course, we also pay a lot of attention to **security**. For this analysis of the AS IS and TO BE situations, we map out both the **strategic vision** as well as the **functional needs** to get a clear view of the organization and the process.

In addition, we also carry out **a technical analysis**: which solution matches the overall picture and your expectations best?

Key points

Analysis of the AS IS/TO BE situations

First check the needs, then solution

Functional, technical and organizational

For every type of user

WHY

Usually, the best technical solution or a ready-made solution is not enough. As an employee and as an organization, you also need a **solution that fits like a glove**. That is why, from the onset, we focus on the **end user** and on **change management**: a solution the end user does not use is just a waste of your time and money.

Hence **the importance** of this concept study. The thorough preliminary investigation prevents bad investments, and the result makes it possible to make the right decision.

5 benefits

Tailor-made solution

Focus on the end user

Control over budget

Detailed assessment

Clear roadmap

HOW

During the **concept study**, we will investigate how to close the gap between the AS IS and the TO BE situations. We start out with the **functional and technical requirements**: these requirements relate to the desired data sources, the desired business logic and business flows, the desired **user experience** (UX) and **interface** (UI) of the application ... Based on the requirements, we propose a **fitting solution**, including a **detailed quote** and **roadmap**.

We take as much account as possible of the end users and their possible resistance to the proposed changes. That is why this concept study also includes an **adoption workshop** in which we discuss how the **communication, documentation, training** and **support** of the end users is best done in your organization. This adoption plan is also included in our proposal.

Deliverables

Analysis of the AS IS situation & analysis of the TO BE situation

Inspire session: The power of the Power Platform

Demo of the chosen technical solution(s)

Adoption workshop

Quote with a description of the concrete solution, including pricing and timing based on the concept study

Adoption plan
