

# Time registration app

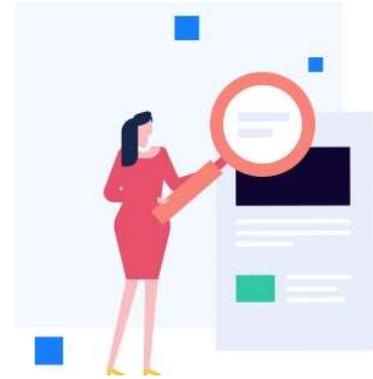

ConXioN  
The new style of IT

Easily register your time wherever you are

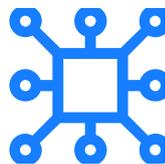

## WHAT

Do you need a simple application in which employees can register their working hours? Or do you already have such a system, but would like to ensure that employees can do this anywhere on any device? Then ConXioN's time registration app can certainly help you!

This app allows employees to register their hours while on the road and even based on GPS coordinates. This data can of course also be integrated with other systems in your organization.

## Key points

Register hours everywhere

GPS coordinates

Tailored to your organization

Integration with HR or reporting  
tools is possible

## WHY

Everyone agrees that time registration is an important task. However, we sometimes forget how long we were working on a particular customer, or how many hours we spent on a specific assignment. That is exactly where this app can help you, so that you, your employees and the HR or accounting department always have the correct information available and can process the data correctly.

## 3 benefits

**Register hours easily and everywhere**

**Overview of hours worked**

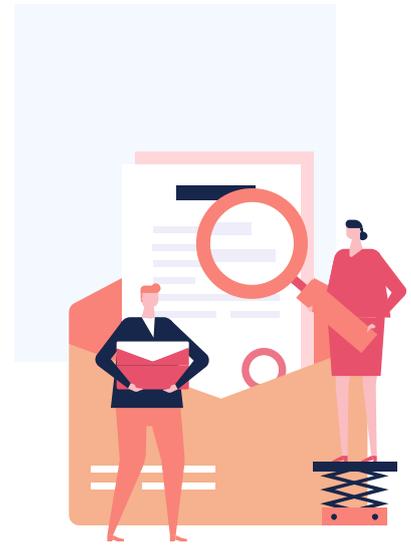

**Less errors**

## HOW

After a discussion about the desired functionalities, we start creating the app, taking into account the look and feel of your organization.

This app makes it possible for employees to register how many hours they have worked wherever they are. Based on GPS coordinates, they can immediately see where they worked (at which customer, at home, in which office etc.). The employee can also choose from various options to indicate the reason for the registered hours, for example, the project on which the employee worked or whether he or she was on leave.

The app can also be integrated with other systems such as an HR or accounting system or even the Power BI reporting tool. This way, this user-friendly app also becomes a useful tool for all kinds of analyses.

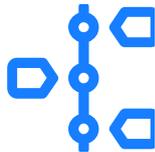

## Deliverables

Inspire session

Analysis AS IS/TO BE situation

Design, development and testing application

Training

Evaluation
