# Event management

Easy and organised event management

WHAT

Do you need a central place to track your events? Would you like an app that you can access anywhere to consult task lists and schedules? Then the event tracking app is exactly what you need!
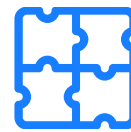

In this app, when a new event is created, a team is created, and a SharePointSite is created to share all the necessary files. So for each event, it automatically makes sure that everyone can access all files in the easiest way possible.

Key points

Easily manage on events

Create teams

Share documents

WHY

By putting the management of events in a Power App, everything is in one central place. This way you immediately know where everything can be found and you can manage the event in a well-organised way.
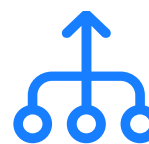

4 benefits

Tailor-made solution

**Focus on the end user**

Efficiently manage events

Everything in a central place

HOW

This customised Microsoft 365 solution based on SharePoint and the Power Platform ensures that events can be managed in a well-organised way. This app immediately makes it much easier to manage teams, share documents and consult schedules everywhere.

The necessary information is placed in a SharePointSite, which can be easily navigated using the Power App. A number of creation processes are also automated, which immediately saves you a lot of time. This way, you can get started with your new event right away!
