

Core BTS Migrator

Enhance Project Delivery & Speed Time-to-Value

Core BTS Migrator is a proprietary platform that accelerates project discovery, automates manual processes, connects disparate information, and improves project outcomes.

Developed in 2008, the platform is powered by best-in-class technology and managed by a team of expert engineers who refine the platform as client needs evolve.

Used alongside the Core BTS Operations Framework, it enhances project delivery and speeds time-to-value. It is extremely versatile and can be leveraged in almost any technical scenario.

MIGRATOR BENEFITS

Eliminates Guesswork

Increases Efficiency

Improves Outcomes

Enables Adoption

Discover

Seamlessly integrates into existing infrastructure to collect detailed data from servers, mail system, workstations, devices, and other systems.

Analyze

Consolidates and standardizes discovery data to accelerate environment analysis, migration planning, and migration process development.

Automate

Uses a common data model to facilitate repeatable processes including but not limited to workstation migrations and end user communications.

Report

Enables real-time dashboards to track project status, milestones, and key performance indicators.
