

# Teams Voice

## Core BTS Deployment & Adoption Capabilities

Microsoft Teams Voice takes enterprise collaboration to new heights. The cloud-based phone system eliminates expensive hardware infrastructure and gives end users the ability to make and receive calls from virtually anywhere. Using the full power of Teams Voice, you can enable a hybrid organization that is secure, connected, and highly communicative.

- Instant, high-quality audio and video calling using VoIP or PSTN
- Call routing via auto attendants and queues
- Increased remote collaboration with calling, chat, and video conferencing in one platform

From planning and design to end user communication and training, Core BTS can accelerate Teams Voice adoption and bridge the gap between people, process, and technology. **Schedule a whiteboard workshop today and begin envisioning your Teams Voice solution.**

## WHY CORE BTS?

As a Microsoft Cloud Solution Provider and Azure Expert MSP, Core BTS can support your full technology lifecycle; from licensing to managed services. We carry both a Teamwork Deployment and an Adoption & Change Management Advanced Specialization, proving we are highly skilled at helping organizations implement, adopt, and embrace Microsoft Teams and Teams Voice.

And because we are both a Microsoft and Cisco Gold Partner, you can trust in our ability to fully integrate Teams with existing PBX and Office 365 solutions. We can design an integrated solution that empowers your employees to connect securely using Microsoft Teams applications as well as physical handsets and headsets.
