

mojoPortal

mojoPortal is an open source, cross-platform, content management system (CMS) for ASP.NET which is written in the C# programming language. The CMS supports plugins and has built-in support for, among others, forums, blogs, event calendars, photo galleries, and an e-commerce feature.^[2] The project was awarded an Open Source Content Management System Award by Packt in 2007 saying that the "ease of use, set of relevant tools and plugins and also the fact that it is cross platform, made it stand out above the rest".^[3] In February 2017, i7MEDIA, LLC, acquired the project from lead developer Joe Audette.^[4]
