Redmine

Redmine is a flexible project management web application. Written using the Ruby on Rails framework, it is cross-platform and cross-database.

Redmine is open source and released under the terms of the   GNU General Public License v2 (GPL).

Features

Some of the main features of Redmine are:

- Multiple projects support
- Flexible role based access control
- Flexible issue tracking system
- Gantt chart and calendar
- News, documents & files management
- Feeds & email notifications
- Per project wiki
- Per project forums
- Time tracking
- Custom fields for issues, time-entries, projects and users
- SCM integration (SVN, CVS, Git, Mercurial and Bazaar)
- Issue creation via email
- Multiple LDAP authentication support
- User self-registration support
- Multilanguage support
- Multiple databases support

Read more about Redmine features.

Documentation

You can read the **Redmine guide**.

- User's Guide
- Developer's Guide

- Frequently Asked Questions
- HowTos
- Plugins
- Themes
- Logo and Icon
- Third Party Tools

Support & getting help ¶

For getting help or discussing Redmine, you can browse the   **Redmine forums** hosted right here in Redmine.

We also have a **chatroom** -   join #redmine on the   libera.chat IRC network.

There's also an unofficial workspace on   **Slack** where you can ask questions and participate in discussions with other Redmine users.

Before submitting a bug report, a patch or a feature request here, please read the Submission guidelines.

Contributing and helping out

Redmine is built and maintained by community volunteers. If you enjoy using it and would like to give back to the community, the Contribute page has several ideas. Software development experience is not required. Check out the Teams Page if you are interested in a specific area to contribute regularly.

You can also make a donation and get listed on the Redmine Donors page.

Who uses Redmine?

This page lists some companies and projects using Redmine.
