CORE
TRANSFORMING BUSINESS THROUGH TECHNOLOGY

Microsoft Information Protection
Quick Deploy

Benefits of MIP:

- Utilise existing features within your Microsoft 365 licensing
- Manage your organisation's compliance with confidence
- Take control of your organisation's data
- Learn best practises from our team of specialists
- Native features of Microsoft 365

Protecting your people.
# Protecting your data.

Microsoft Information Protection (MIP) Quick Deploy provides the necessary tools to help you understand and protect your users and your data.

Microsoft Information Protection (MIP) refers to the information protection features included with M365 E3 and E5 licensing agreements.

As a native element of M365, MIP capabilities help you discover, classify, and protect sensitive information, and reduce the need for third-party applications. MIP Quick Deploy brings those tools to life, aligned to best practices, so your business can benefit from existing investments.

As part of our value-added service, Core helps customers leverage existing tools and features to plan, deploy, and manage MIP tools throughout their business, ensuring regulatory compliance and data protection.

How does Core's MIP Quick Deploy work?

Assess
4 days

→

Deploy
3 - 5 days

→

Handover
1 day
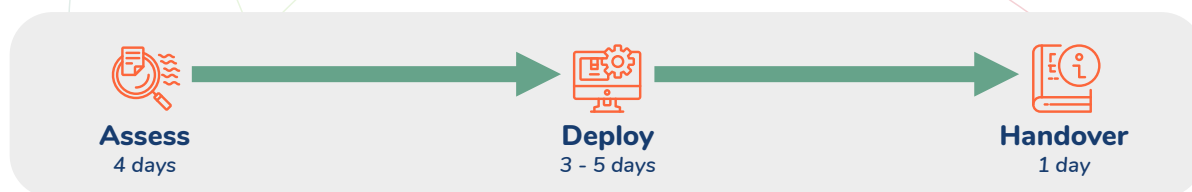

Assess *(4 days)*

An initial discovery and design workshop allows us to assess your environment to ensure the MIP tools can be deployed safely. We will use this opportunity to define business requirements for Sensitivity Labelling, Data Loss Prevention, and Classification through a series of discovery sessions involving the wider business functions. We will also explore the Compliance Manager dashboard, exploring your current Compliance score and customise your improvement actions to reflect any compliance regulations you must adhere to.

The results of the discovery session will then be used to develop a deployment plan.

Deploy

M365 E3 *(3 days)*

The following features are in scope of deployment for customers on Microsoft 365 E3 licensing, based on a POC/Pilot:

- Core will help you protect data that is sensitive to you, by creating custom Sensitive Information Types.

- Classify and label your sensitive data with Sensitivity labelling. Core will help create your key sensitivity labels and configure the protection policies to ensure your sensitive data is secure.

- To discover the sensitive data you have in your Office 365 environment, Core will run content searches and provide reports showing where your sensitive data is being shared and stored.

- Sensitive data leaks are a key concern for many organisations, so Core will create custom Data Loss Prevention policies applied to custom and out-of-the-box sensitive information types. This includes testing before deployment to all users.

M365 E5 *(5 days)*

In addition to the features included with Microsoft E3 licensing, the following features are in scope of deployment for customers on Microsoft 365 E5 licensing, based on a POC/Pilot:

- Core will apply Data Loss Prevention policies to Teams chat and channel messages, which is a specific Microsoft 365 E5 feature.

- To ensure sensitive data is protected on end-user devices and in third-party apps, Core will also configure Data Loss Prevention policies for devices and Defender for Cloud Apps. Policies can include preventing data from being printed, downloaded to a USB, uploaded to a third-party app, and more.

- Core will use the Microsoft Information Protection Scanner to scan your cloud and on-premise infrastructure for sensitive data. There may be additional time required depending on the number of servers.

To ensure your sensitive data is automatically labelled with your defined classification, Core will implement the auto-labelling functionality of Microsoft Information Protection. These are based on your custom sensitive information types.

Handover *(1 day)*

During handover, we will provide an operations guide and handover training for internal IT Teams to manage the deployed features moving forward.

Optional Live Rollout Support *(2 days)*

Where required, our team will be available to support customers during the MIP rollout stage.

Why Core?

Since 2001, when Core deployed the first installation of SharePoint in the UK, we have continued to demonstrate our capability in leading businesses to superior levels of productivity, security, and growth.

Our focused experience and expertise enable us to demonstrate value by ensuring the potential of each solution we offer is realised, reducing costs through efficiencies, and repeatedly driving success with world-class technology platforms.

Wherever you want to take your business, Core's MIP can provide the tools for you to protect your users and data.
