

Azure VMware Solution Quick Start

For more than two decades, VMware has powered millions of applications for hundreds of thousands of organizations. But today the contracting and licensing changes by Broadcom are causing customers evaluate other options without causing much disruption.

Azure VMware Solution, a comprehensive VMware environment running natively on Azure, allows businesses to migrate to the cloud without needing to refactor or re-architect their applications, while retaining existing VMware expertise.

Accelerate your migration journey

Lean on our deep expertise on Azure to get a low-risk move of VMware (VMs) into Azure VMware Solution (AVS).

Our delivery process

Plan migration

- Facilitated workshop to envision planned architecture, security & understand broad integration and connection points.
- Set-up a finalized design of Azure VMware Solution and Pipeline deployment for AVS & Workloads.

Deployment using Coretek approved architectural patterns

- One Azure VMware Solution Cluster consisting of three Azure Bare-metal hosts, one VCSA, and one NSX-T Gateway.

Set-up identity management

- Authorize interaction of Azure resources with each other using Managed Identities.
- Populate secrets in an Azure Key Vault, ensuring that no secrets are unsecured in code or elsewhere.

Migrate environment

- Connect AVS cluster in Azure to Customer Gateway via ExpressRoute or VPN.
- Migrate VMware (up to 3 Workloads) from on-premises vSphere cluster to AVS cluster on Azure.

Duration: 2-3 Weeks

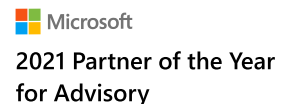

Cost: \$25,000

Why Coretek?

Coretek Is a Nationally Recognized Microsoft Azure Expert MSP and the #1 Microsoft Cloud Solution Provider in the U.S.
