

# Corti Assistant

Automatically document patient visits in real-time, saving clinicians up to 2-hours per day.

Clinicians face **increasing administrative workloads**, pulling valuable time away from patient care. The result? **Cognitive overload, stress, and burnout.**

Corti Assistant eliminates this burden by **automating documentation in real-time**, helping clinicians focus on what matters most – **delivering exceptional patient care.**

## Revolutionize your documentation:

By eliminating time-consuming manual documentation, Corti Assistant streamlines clinical workflows and enhances efficiency – **allowing clinicians to reclaim up to 2 hours per day.**

**AI-powered real-time medical scribe:** Transcribes the conversation, detects key clinical facts, and automates clinical documentation to reduce admin workload.

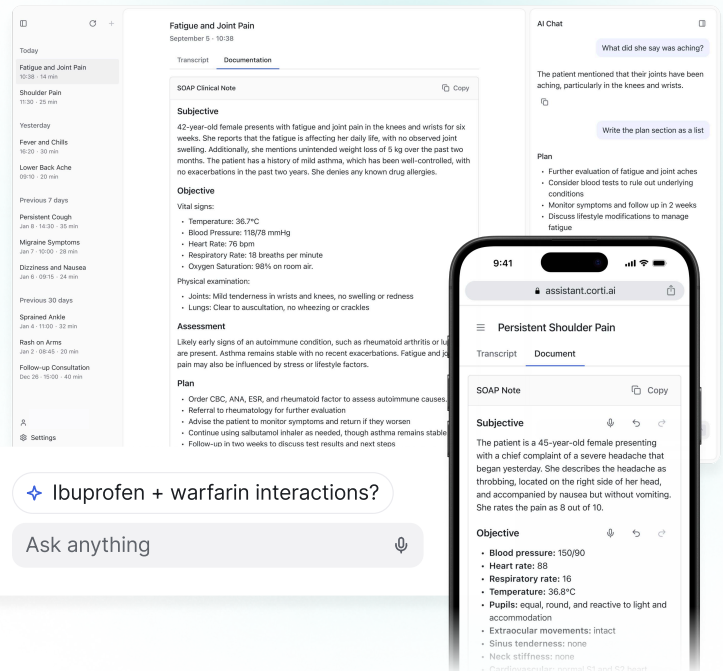

**Seamless EHR integration:** Works within existing systems for effortless adoption.

**Multi-language support:** Available in 10+ languages, adapting to diverse healthcare environments.

Designed to adapt to individual workflows, Assistant ensures accurate, structured documentation without disrupting patient interactions.

Assistant is listening...

## Built for healthcare, trusted by clinicians.

AI in healthcare must be precise, explainable, and purpose-built for clinical use. Corti AI models are developed with deep medical expertise, ensuring accurate, reliable, and traceable results.

Trained on 100 million+ patient interactions, Corti AI continuously refines its performance to meet real-world demands, delivering an experience clinicians can trust.

**Streamable medical intelligence** processes and contextualizes conversations in real-time, providing immediate insights and recommendations.

**Ambient documentation** auto transcribes, summarizes, and codes interactions, minimizing manual edits.

**Multi-document generation:** Enables users to generate additional documents beyond clinical notes, such as patient summaries and referral letters.

**Interactive dialogue:** Allows clinicians to query the AI for insights or clarification during or after consultations.

**Continuous learning:** Memorization and suggested improvement based on user feedback.

## Precision prioritized at every step.

Build with our specialized 3C Framework. Corti Assistant ensures documentation is accurate, relevant, and ready to use – minimizing errors and optimizing workflows.

**Correct:** Generates documentation aligned with clinical intent, minimizing errors.

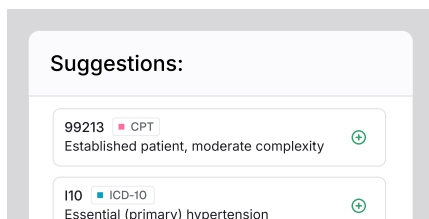

**Concise:** Removes redundancy, delivering clear and actionable records.

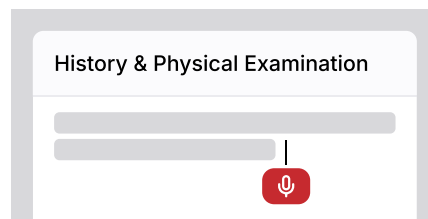

**Complete:** Produces documentation in your preferred template that is ready to use, requiring minimal edits.

## Beyond documentation, a complete AI-powered assistant.

### Automated coding

AI-assisted medical coding improves accuracy and efficiency.

### Patient summaries

Generates concise, structured reports for streamlined handovers.

### Clinical guidance

Offers relevant reference materials in real-time during consultations.

## Built on a foundation of security and compliance that you can trust.

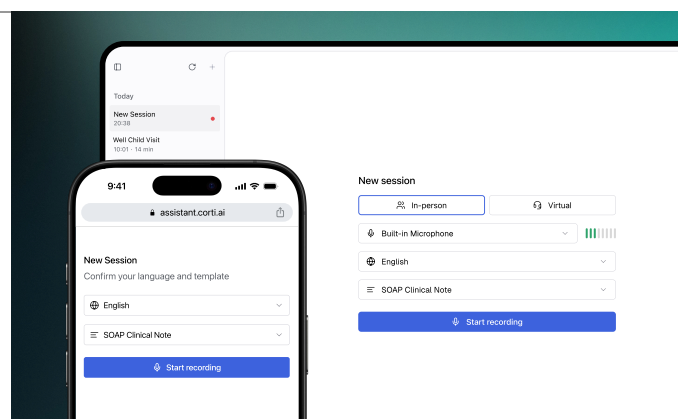

Designed to meet the highest healthcare security and compliance standards, Assistant ensures patient data is always protected and confidential.

- Enterprise-grade security with end-to-end encryption.
- Compliance with HIPAA, GDPR, and SOC 2 Type.
- Minimized AI hallucinations through medical rigor.
- Trusted by healthcare organizations worldwide.

## Focus on patients, not paperwork.

Eliminate administrative burden, improve documentation accuracy, and give clinicians more time for patient care.
