

The AI bill is the new cloud bill.

Covene CloudMonitor puts Azure cost, AI spend, and Claude Code productivity in one view.

Finance is asking why the Anthropic bill spiked. Platform owns the Azure subscriptions. AI engineering owns the Claude Code rollout. None of them have a single view. Covene connects to your Azure subscription and your AI providers, and gives every team the same numbers.

Right for you if you run a Microsoft-shop platform and Anthropic, Azure OpenAI, or Claude Code already shows up on your monthly bill.

See and control your Azure spend

- Every resource, every subscription, every cost line, in one view
- Spot waste before the bill arrives: anomalies, idle resources, budget burn, and tag-level rollups
- Reservations and savings plans allocated correctly, so true cost is finally readable
- Month-end forecast and budget alerts so finance is never surprised

Track AI spend, prove Claude Code's value

- Cost and usage by model, team, and provider, across OpenAI, Azure OpenAI, Anthropic, OpenRouter, and AWS Bedrock
- Spend anomalies and dormant API keys flagged before the monthly invoice closes
- *For Claude Code:* per-developer productivity, adoption, and seat-to-output measurement across API, subscription, and enterprise seat contracts

AI governance and data protection

- Audit trail of every admin action across your Anthropic account: who changed what, when
- Detects personal data and exposed credentials in AI conversations and logs
- Rule-driven alerts in minutes, not weeks

Included on the Business plan.

Buyer outcomes

- **Stop paying twice.** Reserved-instance, savings-plan, and tag-level spend visibility surface waste your bill-only tools miss.
- **Defend AI spend.** Per-model and per-developer cost views catch a runaway prompt before the monthly invoice does.
- **Prove the AI investment.** Claude Code productivity per developer turns seat counts into a defensible ROI number for finance.

Why buy through Azure Marketplace

- **Counts toward your Azure spend commitment.** Purchases retire against your Microsoft Azure Consumption Commitment (MACC), the same as direct Azure usage.
- **Procure through your Azure agreement.** No separate SaaS contract cycle, no new vendor through procurement.
- **Microsoft Standard Contract offered.** Custom terms available on request.
- **Microsoft-native sign-in.** Your team uses the Microsoft identities they already have.

Your data stays yours. Read-only access to your Azure subscription that you control and can revoke at any time. We don't sell your data, and we don't use it to train AI models. Covene support access is opt-in and time-bound; you grant it in Settings and revoke it when you say so.

Plans at a glance

Pro

\$69.99 / month, or \$781.09 / year (\$65.09/mo equivalent)
Small teams and focused stacks. Includes 250 monitored Azure resources, 50,000 AI telemetry events per month, 5 user seats, and 10 Claude Code users.

Business

\$499.99 / month, or \$5,579.89 / year (\$464.99/mo equivalent)
Mid-market and AI-heavy teams. Includes 2,500 monitored resources, 500,000 AI telemetry events per month, 25 user seats, and 100 Claude Code users. Adds role-based access, Anthropic Enterprise analytics, audit trail ingest, and PII alerting.

Overage above plan limits is metered. See the Plans tab on the Marketplace listing for unit rates.

Available now on Azure Marketplace.

Click **Get It Now** on the listing to enroll your first Azure subscription in under five minutes. Pro and Business plans, monthly or annual.
