

Your data, your access, your control.

Read-only access. Two sub-processors. Working toward SOC 2 Type II.

Covene CloudMonitor reads your Azure costs and your AI usage. It does not write to your environment, Covene staff won't read your prompt content, and your data isn't shared with anyone outside Microsoft and Stripe.

Right for you if your team runs production AI workloads on Azure and your security team needs to approve this on the first read.

Read-only by default. We don't need write access to read costs and usage.	No resale, no training. Your data isn't part of someone else's product.	Support access by invitation. We can't see your tenant unless you grant it in Settings.	Built on Microsoft. Sign-in, hosting, contracts, and billing all run through Microsoft.
---	---	---	---

Identity and access • Microsoft Entra ID, Google, or email magic link for user sign-in. Pick whichever fits your team. • For your Azure subscription we ask for Reader, Monitoring Reader, and Cost Management Reader. Never Contributor, never write access. • Access flows through a service principal in your tenant. Revoke it whenever you want. • Covene support access is opt-in and time-bound. You grant it; you revoke it.	Data we collect, data we don't • We connect to your Azure subscription and the AI providers you use, and pull only the cost, usage, and audit signals you turn on. • We won't read your prompts or responses. If you enable Claude Code telemetry or Anthropic compliance ingest, that content lands in your dashboard, not in front of Covene staff. • We won't sell customer data. We won't train AI models on customer data. • Each tenant is logically isolated. Credentials are never shared across tenants.	Infrastructure • Hosted entirely on Microsoft Azure. • TLS 1.2 or higher for all traffic. Telemetry ingest is authenticated per tenant in production. • Vendor API keys and other reversible secrets live in a dedicated secret store. Our database holds only opaque references. • Sub-processors: Microsoft (Azure infrastructure) and Stripe (billing). That's the list.
---	--	--

Your data stays yours. Read-only access to your Azure subscription that you control and can revoke at any time. We do not sell your data. We do not use your data to train AI models. Covene support access is opt-in and time-bound; you grant it in Settings and revoke it when you say so.

Already in Microsoft Marketplace.
