

Deliverect Connection

Overview

Configuration is provided for establishing connections with Deliverect services. The configuration is used in the REST Connection Manager.

[Overview](#)[Configuration](#)[Knowledge Base](#)

Setup

Press icon to get more information about the connection parameters.

Obtain data

Use [REST Source](#) component to get data from service resource.

Insert data

Use [REST Destination](#) component to insert data into service resource.

Configuration

The provided configuration handles the authentication aspect of communicating with the service. To invoke endpoints, specific to you integration needs, consider defining custom [resources](#) (to be used with REST Source and/or REST Destination) or use the [REST Web Service Request Task](#). If you have suggestions for further improvements, we will be happy to [hear](#) your feedback.

Download the configuration from [here](#). Then review the KB article posted [here](#) how to use the configuration.
