Inform – Inspire – Innovate - Integrate
Connect Your Core Systems with Microsoft Copilot Studio

Enquire about pricing: hello@cps.co.uk

Our approach

Analyse
Identify business systems and understand use cases.

Security & Data
Work with you IT teams to understand available methods to connect to your core systems.

Develop
Outline of the technical analysis, options to improve and any security or data item to resolve.

Playback
Playback the PoC to key business owners and highlight key findings in a report.

Extending with Microsoft Copilot Studio

Custom Experience

Non-standard data-sources often require specific handling and processing. By connecting these sources through a Copilot Studio extension, your organisation can tailor their data integration and processing to meet your unique business needs, providing more relevant and actionable insights.

Enhanced Collaboration

By incorporating non-standard sources directly into the Copilot Studio environment, teams across your organisation can access and collaborate on the same data sets in real time. This integration ensures that all team members are on the same page, enhancing productivity and decision-making.

Adapt to change

In dynamic business environments, the ability to quickly adapt to new data sources or changing data structures is crucial. Copilot Studio extensions can be developed to adjust more fluidly, allowing your organisation to remain agile and responsive.

Security and Compliance

Handling data from non-standard sources often involves specific security and compliance requirements. Integrating these sources through a Copilot Studio extension ensures that data governance policies are uniformly applied, protecting sensitive information and meeting regulatory standards.
