

# RPA in a Day

## Automate and optimise your business processes

Robotic Process Automation in a day, is one element of CPS' Power Platform Enablement Services and equips participants with an understanding of Power Automate Desktop RPA through simple scenarios, facilitated by CPS' Power Platform experts.

Free your team from mundane, time-consuming, repetitive tasks so they can focus on higher-value work with robotic process automation (RPA) in Power Automate which includes a new, easy-to-use, desktop version—Power Automate Desktop.

### Create RPA solutions with desktop flows

Easily integrate automation across your organization using desktop flows in Power Automate. Get started quickly using low-code design environments and recorders that are simple enough for everyone to use—even without coding experience.

### Attended RPA

Focus on more high-value work by automating boring, repetitive tasks like front-office activities. With attended RPA, humans initiate tasks or respond to specific prompts—like providing a yes/no response.

### Unattended RPA

Let bots handle the tedious, menial work for you by recording and playing back actions—without the need for anyone to be at their computer. With unattended RPA everything is fully automated, so you're able to schedule and trigger events which accelerates end-to-end automation of high-volume tasks.

## Agenda

- Introduction to Robotic Process Automation
- Lab 01: Build your first Power Automate Desktop UI flow
- Lab 02: Use input and output parameters
- Lab 03: Trigger your Power Automate Desktop UI flow
- Lab 04: Integration with Outlook connector
- Lab 05: Use AI builder to process invoice forms
- Lab 06: Use Teams connector and adaptive card
- Lab 07: Web Automation using Power Automate Desktop

### 1 Day hands on workshop

Up to 8  
Participants

£2,700
