

Zoom to Microsoft Teams

CPS are Industry leading experts in Microsoft Teams with proven track record in transitioning customers from third party applications such as Zoom to Microsoft Teams.

We can provide expert guidance from reviewing your existing Zoom workloads then mapping these use case to Teams capabilities, through an adoption strategy, training and full delivery to Microsoft Teams.

The CPS Zoom-to-Teams Accelerated Workload Migration provides organisations with a robust and flexible approach to transitioning voice, meetings, conferencing, and calling capabilities to Microsoft Teams. The modular nature of the engagement caters for any number of Zoom workloads to be targeted, scaling to include only the required activities whilst being delivered within a defined approach.

Why Microsoft Teams over Zoom?

Each organization requires far more functionality than just joining or running online meetings in order to be productive and successful.

With Microsoft Teams, you not only have the ability to run online meetings, you can use the chat function for quick and responsive conversations, collaborate on documents at the same time as your colleagues or peers and make calls directly from the Teams app, with all this functionality Teams really is the central hub for Collaboration and Communication.

Microsoft Teams is a feature rich, secure platform which has multiple built-in features which are not included with Zoom. Some examples of this are:

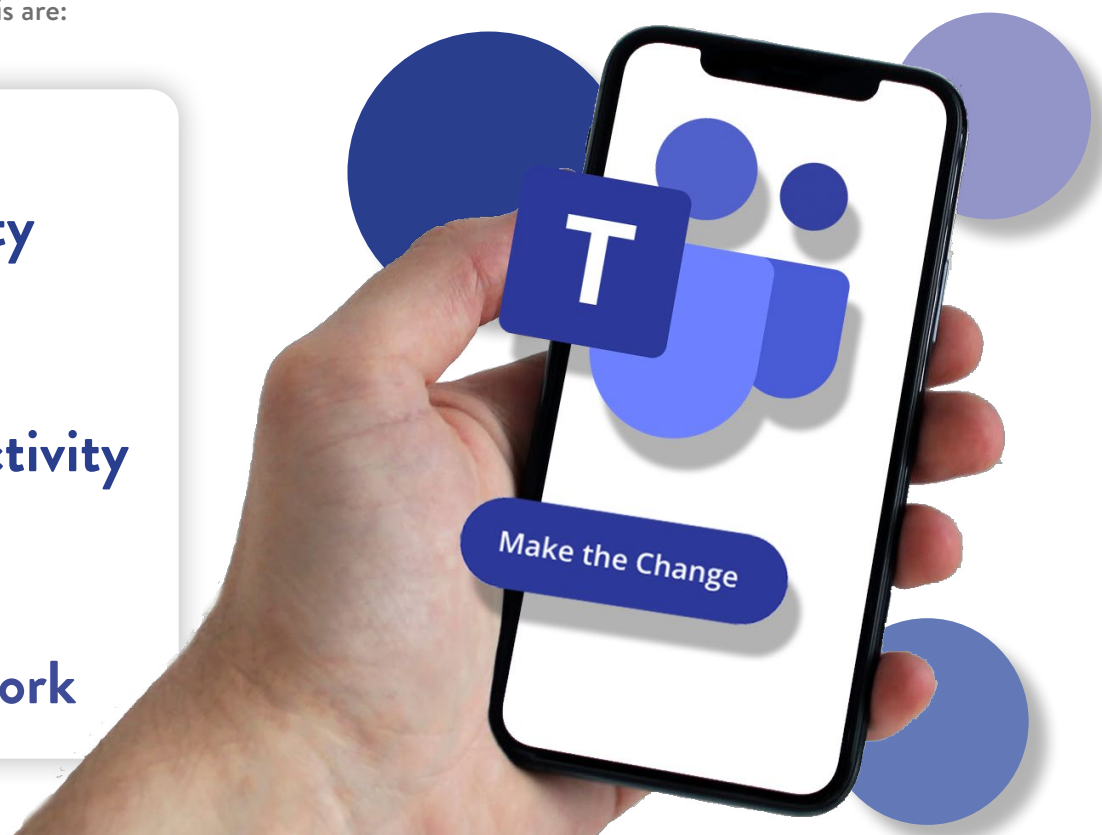

Security

Productivity

Teamwork

PROTECTING USERS & DATA

Microsoft Teams protects your users and data! Don't just take our word for it, we back our promise with strong contractual agreements for your peace of mind!

VS.

Zoom lacks critical security features, like preventing data loss or stopping users from opening malicious files, exposing your IP to risk!

ENABLING REMOTE WORK

Microsoft Teams is a hub for teamwork that supports remote collaboration end to end, so your teams can meet online and keep persistent channels of discussion!

VS.

Zoom can enable online meetings but you will need additional third party tools to fully equip your teams to collaborate remotely!

CREATING AN INCLUSIVE WORKSPACE

Microsoft Teams is a platform that helps your entire workforce to be productive remotely no matter their abilities, language, work style or technical skill.

VS.

Zoom lacks tools like real - time live captioning or automated workflows. Its host based licensing means only designated hosts get full access.

Our approach

Leveraging our experience and knowledge, we will work with you to provide a robust and flexible approach to transition Voice, Meetings, Conferencing and Calling Capabilities to Microsoft Teams from Zoom. We will cater for any number of Zoom workloads to be targeted, scaling to include only the required activities whilst being delivered within a defined approach. The following tables detailed Zoom workloads, as recognized by CPS as suitable for this engagement:

Zoom Workloads

Meeting & Chat

Enterprise Video Conferencing with real-time message and content sharing

Rooms & Workspaces

Conference rooms run with dedicated Zoom hardware (Zoom Rooms)

Zoom Phone

Enterprise Cloud-based phone systems with optional BYOC Capability

Zoom Webinar

Live virtual events and broadcasting webinar solution

Zoom Apps

Extending and enhancing of Zoom capabilities through third-party Apps
