

navio enables collaboration across an organization's entire data and artificial intelligence (AI) landscape.

It helps automate the process of creating, managing, monitoring and deploying machine learning models.

> All machines at a glance

With navio, you have an easy overview of all machines using their models and maintain complete control.

> One-click deployment

Deploying models to production is laborious and complicated. Leave that to navio and your models are easily and instantly deployed via REST.

> Supports custom models

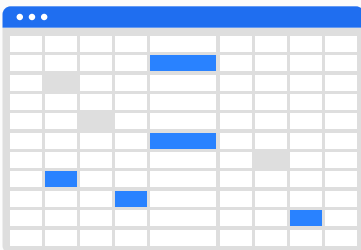

Created your own custom model? Perfect! Just add navio metadata and upload the model to deploy it!

compatible with

mlflow

> Monitoring and control

Keep track of your model and its results. See how many requests have been sent and check regularly if the model is still accurate.

- Upload data as CSV or via database connection.
- Automated machine learning for tabular & time-series data.
- Out-of-distribution detection for any model with a dataset.
- On-premise solution.
- Coming soon to Azure!
