

Trisus Medication Compare

Get the financial and operational clarity you need to lead your pharmacy services with confidence.

Finally...immediate access to deep, actionable insights detailing your drug purchases and operational outcomes.

Pharmacy leaders face daunting challenges in today's volatile healthcare environment. Limited resources, increased regulation, supply chain pressures, and the growing cost of managing complex medication regimens are all mounting concerns.

Trisus Medication Compare's proprietary software compiles and displays your customizable results in seconds, allowing you to monitor and compare drug costs to our real-world database of more than 160M patient encounters.

Variance Reports

Uncovers differences for specific drug utilization metrics between a target facility and an index.

The application facilitates in-depth analysis of drug purchases:

- Compare purchases across WAC, 340B, or GPO accounts down to the medication class or even NDC level
- Assess utilization in RWD for medication classes or NDCs to forecast the impact on your institution or network

POP-BUILDER Rx

Provides comparative data between selected cohorts as well as Trisus Medication Compare's real-world data index.

The application facilitates in-depth analysis of drug prices:

- Analyze utilization patterns to identify opportunities for treatment regimens
- Allows custom queries of medication use to compare associated operational outcomes (e.g., ALOS, 30-day readmissions, encounter diagnoses, and medical procedures)

Powered by real-time, real-world data

Trisus Medication Compare's unique RWD asset spans nationwide, with longitudinal data on more than 35M unique, de-identified patients, collected from over 2.8 billion drug dispensations. Data is updated daily and adds more than 1M new, de-identified patients every month for near-real-time information and insights.

1M+ new patients per month

35M+ total patients

2.8B+ total drug dispensations

\$21B+ total drug spend

Finally...data that enables evidence-based pharmacy decisions

Trisus Medication Compare arms operational and financial decision-makers with real-world evidence to aid in drug pricing negotiations, drug utilization monitoring and management, formulary decisions and financial reporting.

Volume.

Robust data set that provides the option to compare medication utilization patterns across similar organizations nationally

Value.

Assists P&T committees with analysis of medication use patterns to maximize quality and reduce total cost of care

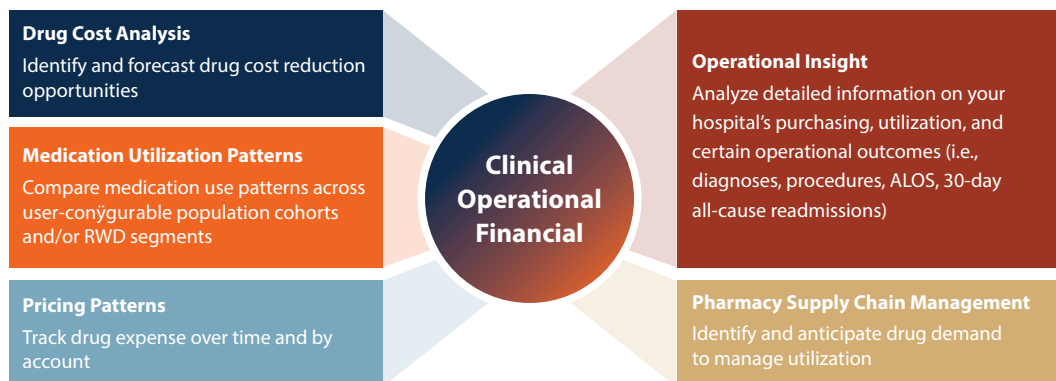

Variation

Identifies patterns of medication use and allows comparison to a RWD census population for financial performance and operational outcomes, enabling root cause investigations and intervention

Actionable insights for key decision makers

Trisus Medication Compare provides your team direct access to data on drug utilization, trends, purchase costs and operational outcomes.
