15 Days Teams Platform proof of concept project

Many companies consider Teams as a tool for communication and calling.
But Teams is a powerful platform for building business applications.
See the value of Teams as a business application platform with the help of Crayon experts.

With Crayon's PoC Teams Platform solutions you can:

Develop a ready-to-use business application aimed at increasing employee productivity or automating the work of frontline workers	Evaluate the flexibility and Teams Platform capabilities: such as chatbots, messaging extensions, tabs, meeting extensions.	Get to know the catalog of solution templates for Teams

During 15 days together with Crayon experts we will go through all stages of Teams applications development:

Discovery	Envisioning
to identify business needs and pains, as well as define the main scenario for automation abilities	for business process description, requirements gathering and solution architecture development
Implementation	**Deployment**
where solution development with regular demonstrations and discussions with stakeholders will take place	deploying the application and providing access to it to the workgroup of employees

As a result, you will get a ready-made solution, along with an understanding of the architecture and implementation steps using Teams Platform capabilities.
