

Navigating a cloud migration is complex. As a Microsoft Azure Expert MSP, we'll make sure you avoid the common roadblocks that cause cloud adoption initiatives to stall or fail before they even start. We'll test the migration of your applications, data, and architecture to Azure while helping your organization create a cloud strategy to address key security and compliance, disaster recovery and backup, and data retention goals.

Your goal is to migrate one to three Infrastructure workloads. The Proof of Concept (PoC) is where to start. This process provides answers to three critical questions.

- Is it feasible?
- Are the right resources available and prepared?
- Is the decision a go or a no-go for this migration?

## Our Process

Your Journey

Workshop

Assessment

PoC

Implementation

## Deliverables

- Final PoC plan specification
- PoC Execution
- Debrief and review of PoC execution
- Strategic plan for implementation that includes migration plan or roadmap

## Service Overview

With the Crayon cloud PoC service we'll help you test your cloud-first strategy prior to implementation – to ensure you can make data-driven decisions and follow an informed process upon implementation.

You'll be able to validate your cloud migration by understanding the risks and business impact of moving services or workloads to the cloud.

We can also help you roll out the full project and can work with providers to manage the environment moving forward.
