

# Model-Driven & Canvas Based Power Apps Workshop

## Solution overview

During this workshop, the attendees will go through instructor-led training to help them get a grasp of the Power Platform, more specifically the Power Apps. The workshop will start with an overview of the cloud-based services within the Power Platform, illustrate the differences and best-practices in use for both model-driven and canvas Power Apps, and then go deep-dive into vertical specific (based on the client attending) examples to spark ideas for the client.

## Opportunity

Workshop attendees will learn the difference between model driven apps and canvas apps, as well as when to use each type of app. They will learn to understand the licensing model around M365 and the Power Apps.

We will also cover the best practices when choosing which model as well as the limitations and benefits on each solution. At the end of the workshop, the client will begin realizing automation opportunities for their organization.

## Clients

Cross-industry

Startup, SMB, Enterprise

Estimated  
Implementation  
Timeframe

2-4 Hours

Estimated  
Implementation  
Cost

**\$1,000**

Currency is based on the region client is in (i.e., USD or CAD).
