

ASSESSMENT: PARAGON® TECHNICAL AND PROCESS ASSESSMENT

Working with an organisation's IT team to assess its readiness to implement Paragon® best practice for Microsoft Power Platform and Dynamics 365 technologies and processes.

A set of workshops detailing Crimson's best practice regarding application life cycle management, Power Platform or Dynamics 365 solution management, and update preparation with Evergreen management. The session also includes build and design planning using Azure DevOps to meet the needs of the business, plus a demonstration of how these technologies and processes result in the adoption of continuous integration and deployment.

Crimson work with organisations to drive awareness of the framework components, and then assess their maturity to implement the required framework. This assessment covers the following themes and activities:

The Framework processes

Understand the processes required to solve the organisation's unique problems with an interactive assessment.

Technology

Take a look at best practice for solution and Evergreen management and review whether the organisation is ready for implementation with an interactive maturity assessment.

Following the workshops, organisations will receive an assessment report, which outlines what has been captured during the assessment exercises and includes recommendations and actions.

Who should attend?

C-Suite / Business Leads – a maximum of 15 people should attend the workshops

What is included?

Workshops and an assessment report detailing recommendations and actions.

Time included

Five days, to include four workshops and an assessment report.
