

AI Advisory Services

Microsoft Copilot Best Practice Adoption Framework

Crimson's AI Advisory Services represent a strategic opportunity for your organisation to define its AI vision and unlock the productivity potential of Microsoft 365 Copilot.

The engagement focuses on understanding how AI can move your organisation forward and establishing what must be in place to successfully realise measurable business value. We help you identify opportunities for productivity, efficiency, and informed decision-making enabled by AI, underpinned by strong governance, robust data foundations, and clearly defined success metrics.

Crimson's AI specialists will guide your stakeholders through a structured discovery workshop to explore how Microsoft 365 Copilot can be applied across your key business processes.

The workshop aligns vision, outcomes, use cases, governance, and success metrics into a practical AI roadmap.

The engagement concludes with a formal AI Advisory assessment report, including an initial business case.

Who should attend?

Up to eight people from the C-Suite / technology leads

What is included?

A half-day workshop, a half-day playback and an AI use cases report.

Time included

Seven days, including a half-day workshop, a report and a half-day playback.
