

WHY CHOOSE US?

Enterprise Private Cloud

Is data security a priority, are you not allowed to route your email through a 3rd party? With Crossware's unique Enterprise Private Cloud (EPC) Solution you can host your own Crossware service in your Azure infrastructure.

This means your email is always in your control until they are delivered to the recipient.

Dynamic Signatures

Our Dynamic Signature Add-in provides the users the ability to see a preview, select different signatures and even insert a signature into an email when composing. All features are customisable for each user/group. This works for OWA, Outlook desktop for Windows and Mac. The add-in can also insert a signature when composing emails on mobile devices using the Outlook app.

Legal Compliance

Are you confident that every email being sent from your organisation is compliant with the law? With Crossware Email Signature, company-wide email disclaimers can be created so you can rest assured that each email sent contains your compliant disclaimer.

Consistent Branding

You spend time and money designing logos, signage, and business cards. But when it comes to email, branding is often nowhere to be found, or left to the whims of each employee. Crossware Email Signature ensures that every email contains consistent professional branding.

Centralized Management

You can stop chasing up your colleagues about manually changing their outdated signature! Centrally control company signatures with ease with our powerful signature solution.

Automation

With the ability to create and set complex rules, every part of your company signature can be controlled - use rules to specify when, where and how you want to display everything from ad banners to phone numbers.
