

Export Single & Multiple VCF Files

Virtual Contact File, or VCF File, is a popular file format for storing business cards that is frequently exchanged as an email address attachment. As a result, reaching them through numerous platforms is challenging. So, a way to retrieve these vCard files and convert VCF files to other file formats is made available via the CubexSoft vCard Converter Tool. The vCard file converter application keeps all vCard contact fields.

- **Single Contacts vCard** – You can use the software to access and convert single contact VCF files in bulk.
- **Multiple Contacts vCard** – The utility can also convert large vCard files that include countless contacts and their information.

Dual Mode for Uploading vCard Contacts

The user will have two options for loading vCard contacts after downloading the vCard Export Tool: Add Files and Add Folders, respectively. So, users are free to select any option for adding vCard contact files to the software panel for conversion.

- **Add File(s)**– This option enables the software window to accept the upload of several VCF files of your choice. When choosing certain vCard files for conversion, users can hit CTRL.
- **Add Folder(s)**– Using this option, you can upload an entire folder including an unlimited number of VCF files and many subfolders. As a result, our esteemed clients can save valuable time.

Export vCard Files of Different Versions

With the CubexSoft VCF converter software, users can run a thorough forensics analysis on vCard contacts data, export and import vCard files to numerous file formats, and export and import vCard files to email services. The software can also convert files from three different VCF versions:

- **vCard Version 2.1:** vCard 2.1 uses US-ASCII encoding by default.
- **vCard Version 3.0:** Although there is a newer version, this format is the most popular one.
- **vCard Version 4.0:** Version 4.0 of vCard always uses UTF-8. This is the currently accepted standard format, which is based on RFC 6350.

Convert vCard File Contacts with All Fields

For converting vCard contacts, VCF Version Converter is the ideal program. The software maintains all VCF file attributes, including attachments, a profile photo, a full name, an email address, a company name, a job title, a website address, a business address, a home phone number, a business fax number, a mobile phone number, and a home address.

Supports All vCard File Platforms

The VCF File Converter software enables converting vCard files produced by G Suite, Outlook, Google Contacts, and iCloud. Firefox Thunderbird, etc. Any application and any vCard File format can be converted.

Maintain vCard File Structure

The tool's main focus is on preserving the data structure of vCard files when converting them to another format. Even after the entire vCard file conversion, all of the file's metadata will be preserved. Get the same outcome from the.vcf format in a different format.

vCard Conversion with Attribution

The VCF Converter Tool's job is to take care of the data that is present in the vCard contacts as well as convert VCF contacts into a variety of generic formats. Throughout the vCard VCF conversion procedure, all of the data's rich-text formatting will be secure. Also, after successfully completing the conversion procedure, the folder structure is retained

Browse Preferable Destination Path

After choosing the saving option, the vCard Converter utility displays the default destination path. However, the user can change the destination by clicking the Browse icon and store the converted data at a different location if they do not want to save the data to the provided location. To keep converted data, users can quickly create a New Folder using software.

Workable on All Windows OS

The CubexSoft vCard Converter Tool runs flawlessly on a Windows based operating system. Convert.vcf contacts to a variety of file formats and get accurate results. The VCF Converter operates perfectly on all the version of Windows OS including Windows 11.

Easy to Use Application

vCard Contacts Converter is designed to have a simple and easy user-friendly interface, to make it easy to operate by all types of users. The application enables both professional users and technical users to resolve "how to convert contacts folders locally or in cloud" question and successfully export VCF files without any efforts and other related issues.

Option to Save Log Report

Once the vCard contacts conversion is completed, the application opens a Notepad screen showing the complete migration status report. Saving this report will help you check and analyse the migration status at a later stage.

Convert Bulk VCF Files at Once

This superb, powerful VCF Contacts Converter is especially made to convert several vCard contact files at once. Thus, there is no need to repeat the vCard conversion process. You can add as many VCF files as you want to the software panel, then convert them all at once to save time.
