

# CumulusPro Invoice Processing app

Accelerate invoice processing with digital workflows

A workflow solution that speeds up your accounts payable process by minimising repetitive, time-consuming tasks, and eliminating paper from your invoice processing activities.

Automated 3-way invoice matching

## WHAT OUR CUSTOMERS ARE SAYING

“Using the Invoice Processing app from CumulusPro, business logic and approval rules are easily modified to accommodate different accounting practices, and changes in a growing organization. Moreover, business rules and manager approvals are basically a few mouse clicks with the low code development capability of the BPM platform.”

*-Finance manager, global pneumatic products manufacturer*

## WHAT WE OFFER

### Improve process visibility and governance

Every invoice in the app follows a consistent process that comes with a complete audit trail. This information enables business heads to identify system and process bottlenecks, ensure that service-level agreements (SLAs) and discounts have been met, and easily meet vendor inquiries as well as audit governance.

### Transform accountants into process experts

Intuitive graphical designer instantly transforms accountants into process experts using an easy to use graphical interface. Accountants and IT specialists alike can jointly design invoice processing workflows simply by dragging and dropping graphical flow objects into the BPMN models.

### Invoice processing accelerated by seamless collaboration

If missing information on an invoice is required from an external supplier, a one-time access to the Invoice Processing app is provided through a secured email without the need to create an extra user account.

### Fast On-boarding

Processing an invoice on the Invoice Processing app requires no prior accounting or financial training as the app's user interface is simple to use.
