Simplify Device Management with Microsoft Intune

Proper management of your organization's devices and applications is one of the things that leads to company success. If devices and applications are not running properly and securely, time and money are lost. An all-in-one solution for managing your devices and applications can save company resources and boost production. Cloud-native solutions like Microsoft Intune can eliminate the need for on-premise servers and provide device and application management all in one place.

WHAT IS MICROSOFT INTUNE?

- **Unified Endpoint Management:** Microsoft Intune can manage all your devices, whether they are corporate-owned or BYOD (Bring Your Own Device), from a single platform. This includes Windows, Macs, Android, IOS or even ChromeOS

- **Application Management:** Deploy, manage, and update applications seamlessly across your organization to ensure your workforce has the tools they need.

- **Legacy Service Integration:** Intune seamlessly integrates with hybrid Active Directory (AD) environments, allowing for unified and efficient management of both on-premises and cloud resources. Worried about having to reconfigure your Group Policies on a new platform? You can use Intune's Group Policy Analytics to import, analyze, and migrate GPOs and their settings.

- **BYOD:** With Intune's features for BYOD (Bring your own device), employees can securely access corporate resources on their personal devices while maintaining compliance.

- **Easy Enrollment with Microsoft Autopilot:** Simplify device setup and configuration, ensuring a seamless onboarding experience for new devices straight out of the box.

- **Enhanced Security:** Intune provides robust security features like advanced threat protection, data loss prevention, and conditional access policies; ensuring that only compliant and secure devices have access to corporate resources. Additionally, Intune integrates seamlessly with Microsoft Defender for Endpoint, offering a comprehensive antivirus solution that includes advanced threat detection and response capabilities.

HOW RED RIVER'S CLOUD SERVICES SUPPORT NEW TECHNOLOGIES

Whether you are looking for help with implementing Microsoft Intune or looking for a fully managed service, Red River can provide:

Intune Deployment Services

From initial planning to execution, Red River offers tailored Intune deployment services to ensure a smooth and efficient rollout across your organization. Red River offers both white-glove service or self-enrollment options and can tailor the deployment process to match your specific needs.

Admin and User Adoption Training

If needed, Red River will provide you with a customized training plan for both your support users as well as your admin team to ensure they are able to support your Intune environment.

Intune as a Managed Service

With extensive experience and expertise, Red River can efficiently manage your Intune environment, ensuring optimal performance and compliance with industry standards.
