

Implement And manage NIS2 smart

Infosheet

Why use the Cyber Basics NIS2?

The Cyber Basics NIS2 compliance management tool is an online package that unites the legal and organizational requirements and the technical implementation in your organization. It delivers a prepared NIS2 management system that organizes the following:

- Insight of the required NIS2 measures
- The structured implementation of NIS2
- Continuous registration of your NIS2 measures
- Management BI dashboards
- Direct demonstrability of your compliance with NIS2
- Changes and additions in the future
- Technical requirements assessment based on CIS controls /Zero Trust Architecture

Is it useable with other systems?

Yes. You can keep what you already have in terms of cyber security measures in your existing ISMS.

The NIS2 requirements are in your NIS2 management system and you can always refer to your existing working methods and where they can be found. It's a referral structure to your organization and its practices. You don't have to throw anything away, just add what's needed.

And what about any other legislation?

Cyber Basics offers smart implementation and management of other legislation too. We have for an example ISO27001 / NEN7510 / DORA / GDPR available and our teams are continuously developing the platform and that also means adding new legislation.

We make it smart too: overlapping requirements are managed as much as possible.

About us

Cyber Basics smart compliance platform enables thousands of users to apply their policies, procedures, and registrations quickly and efficiently. Through our collaboration with cyber security experts, you get the seamless link between your ISMS policy and the technical measures you need to take to comply with the relevant legislation/standards.
