

# A secure environment that's ready when you are

## Truly secure cloud environments are hard to set up and maintain

Hyperscale cloud designed for the general public often doesn't meet the needs of organisations with highly sensitive workloads. It can lack the sovereignty, security controls, and governance required to support critical operations securely. That's leaving many high-security sectors—such as defence, government, healthcare, and academia—with a cyber maturity gap. This gap between current and desired cyber security practices is putting organisations at risk, leaving their data and their customers' data vulnerable, and adding complexity to collaboration and innovation.

## Nebula gives you a secure cloud platform set up in just weeks

Nebula is Australia's multi-tenant cloud platform **built to Information Security Manual (ISM) PROTECTED standard**. It provides a well-protected work environment that's tailored for organisations dealing with sensitive data.

Our customised Nebula deployments provide a highly secure, scalable, and compliant environment, which can integrate with your existing IT if needed, and can be up and running in just a few weeks.

### Pioneers for secure multi-tenant cloud

Enjoy first mover advantage with the first multi-tenant secure cloud platform in Australia, built on Microsoft Azure to ISM PROTECTED standard.

### Purpose-built for the high-security sector

Nebula is purpose-built for industries with stringent security requirements. Protect sensitive workloads while reducing the risk of breaches and regulatory penalties.

### Accelerated time-to-market

Your secure Nebula environment can be up and running in just a matter of weeks, which helps you respond to market demands and begin projects without delays.

### One vendor for managed services

CyberCX's managed services cover both cloud and cyber security, making IT operations simple, reducing vendor complexity, and lowering costs.

## Core Nebula platform

Nebula enables the rapid delivery of sensitive projects by allowing users to safely access critical data sets, leverage the latest Microsoft tooling and engage in seamless cross-tenant collaboration – all within a highly secure and scalable environment.

### Store and access highly sensitive data

- Built to ISM PROTECTED standard
- Role based security to ensure controlled access to data

### Collaborate with speed and confidence

- Reduce time taken for problem solving
- Leveraging common collaboration tools such as Microsoft 365 in a secure manner

### Securely innovate with managed risk

- Secure access to Microsoft Azure
- Designed to manage risk to allow secure innovation with the latest tools such as Microsoft Open AI

## Supported by expert secure managed services

Our expert CyberCX security managed services team works to enhance and protect the full breadth of your organisation's digital assets.

### Secure managed cloud services

Our suite of managed IT and Governance services is delivered in a multi-tenanted cloud, engineered to ISM PROTECTED and designed to optimise and secure cloud infrastructure with 24/7 monitoring, without the burden of complex environments.

### Advanced cyber security managed services

State-of-the-art security protocols and proactive threat management to protect you from cyber threats and adhere to stringent regulatory compliance.

## To bring your business big benefits

Provides an ongoing response to evolving cyber threats

Focus on core operations with greater peace of mind

Reduces the need for 'security-cleared' manpower
