Well Architected Framework

Five Pillars

Aligning to Microsoft best practice, audit your existing footprint to ensure consistent compliance with the latest controls

Security

Design, implement, automate & monitor industry security best practices at all layers of the stack

Operational Excellence

Run, manage & monitor workloads to deliver business value and continuous improvement

Reliability

Auto recover from failures with dynamic resource management to meet operational thresholds

Performance Efficiency

Use resources efficiently to support on demand changes to deliver optimal performance

Cost Optimisation

Avoid & eliminate unnecessary cost by architecting solutions with scalable and cost effective resources
