⬤ CYDEF — ABOUT US

WHO
WE ARE

Founded in 2017, CYDEF is a Canadian cybersecurity company. Our team leverages decades of security operations, military, and engineering experience.

WHAT
WE DO

We've built the only endpoint security solution based on exception management. This allows our threat hunters to find criminal activity engineered to bypass automated tools. We detect threats that others can't.

HOW
WE DO IT

We eliminate what we know is safe and investigate everything else. This ensures 100% of your telemetry is systematically reviewed by humans. And it's managed for you.

WHY
WE DO IT

We were frustrated with the lack of trust, transparency, and results in the cybersecurity industry. We wanted to provide a solution that is simple, affordable, and generates consistent results.
