A MORE COMPREHENSIVE BACKUP

Disaster Recovery you can depend on.

FileScience Backup and Recovery is a fully managed Cloud-to-Cloud service that bulletproofs your data.

FileScience At A Glance

- Complete and flexible solution
- Data recoverable within 24 hours, faster if necessary
- Protection from multiple causes of data loss, accidental and malicious
- Configure your settings for number of versions stored (min. 10), aging and backup frequency.
- Store files from apps nobody else can.

Critical Protection

Protect your invaluable assets

Ensuring business continuity and data availability is the number one priority for modern organizations, regardless of scale, industry, or region.

Responsible Management

Take charge of your data security

Gaps in backup capability can lead to immediate, drastic consequences from skyrocketing downtime costs and customer dissatisfaction to bankruptcy.

Operational Efficiency

Avoid unsatisfactory alternatives

Cloud-to-cloud solutions are foolproof ways to avoid persistent threats while achieving stable continuity and data availability.

What Our Customers Are Saying

"The question isn't who would want FileScience. The question is who wouldn't! "

"I see you as my number one solution."

"Can you guys give me a quote by Monday? "

Benefits to Your Business

INDISPENSABLE PROTECTION WITH CLOUD-TO-CLOUD BACKUP

Cloud apps are everywhere in today's offices. Gone are the days when you kept your data on an internal hard drive. That's not only old tech, given today's cyber threat environment, it's dangerous tech.

Whether you need to protect data on a personal laptop, an enterprise network or a portfolio of growing clients, the best solution is in the cloud. running has outstripped data protections. Many apps promote redundant storage, but in reality, user data has been relatively defenseless. That is, until now. Cloud-to-cloud backup and restore solutions are the technological innovation that defends stored data from a host of threats, everything from human error to malware, ransomware, malicious insiders, even gaps in retention policies. Not all solutions are equal.

Our promise to you:

We have championed the Cloud-to-Cloud space and taken a strong position that all Cloud Apps must be in an Air Gapped environment in order to meet compliance. This protects against malware, malicious actors, and the most common threat by far, human error.

Why should you backup G-Suite and Office 365 data?
Data backup is your responsibility. Google, Microsoft, Zoom and others do not take responsibility for your data.

Tangible Benefits / Desired Outcomes

FileScience offers ease of use, flexibility and options that allow you and your team to get more done and gives outside counsel and execs easier access to the files they need.

It restores files in virtually any format you'd like, lets you schedule your backups, decide how long to retain them, and keeps a minimum of ten versions per file.

Why FileScience?

Secure – Flexible - Comprehensive - Affordable
